TITLE 327 WATER POLLUTION CONTROL BOARD

DRAFT RULE

#01-95(WPCB)

DIGEST

This rulemaking is being initiated due to the new federal Phase II program regulations for storm water discharges. The National Pollutant Discharge Elimination System (NPDES) storm water Phase II final rule was published on December 8, 1999, at 64 FR 68722. Therefore, the amendments to 327 IAC 15-5, Storm water run-off associated with construction activity, and 327 IAC 15-6, Storm water discharges associated with industrial activity, seek to modify and revise the existing rules to add the federal Phase II requirements, add changes to the Phase I program, and add clarity and effectiveness to the existing program. Revisions are also being made to 327 IAC 15-2 and 327 IAC 15-3, to bring them in line with the amendments to the storm water rules. Therefore, this rulemaking adds 327 IAC 15-5-5.5, 327 IAC 15-5-6.5, 327 IAC 15-5-7.5, 327 IAC 15-6-7.3, 327 IAC 15-6-7.5, 327 IAC 15-6-8.5, 327 IAC 15-6-10, 327 IAC 15-6-11, and 327 IAC 15-6-12. Amends 327 IAC 15-2-3, 327 IAC 15-2-6, 327 IAC 15-2-8, 327 IAC 15-2-9, 327 IAC 15-3-1, 327 IAC 15-3-2, 327 IAC 15-3-3, 327 IAC 15-5-1, 327 IAC 15-5-2, 327 IAC 15-5-3, 327 IAC 15-5-4, 327 IAC 15-5-5, 327 IAC 15-5-6, 327 IAC 15-5-7, 327 IAC 15-5-8, 327 IAC 15-5-10, 327 IAC 15-5-12, 327 IAC 15-6-1, 327 IAC 15-6-2, 327 IAC 15-6-4, 327 IAC 15-6-5, 327 IAC 15-6-6, and 327 IAC 15-6-7. Repeals 327 IAC 15-5-11. Effective 30 days after filing with the secretary of state.

HISTORY

First Notice of Comment Period: April 1, 2001, Indiana Register (24 IR 2243).

Second Notice of Comment Period and Notice of First Hearing: September 1, 2001, Indiana Register (24 IR 4242).

Change in Notice of Public Hearing: November 1, 2001, Indiana Register (25 IR 404).

Change in Notice of Public Hearing: November 1, 2002, Indiana Register (26 IR 416).

Change in Notice of Public Hearing: December 1, 2002, Indiana Register (26 IR XX).

SECTION 1. 327 IAC 15-2-3 IS AMENDED TO READ AS FOLLOWS:_____

327 IAC 15-2-3 NPDES general permit rule applicability requirements

Authority: IC 13-14-8; IC 13-14-9; IC 13-15-1-2; IC 13-15-2-1; IC 13-18-3

Affected: IC 13-11-2; IC 13-18-4

Sec. 3. (a) A general permit rule may regulate all designated categories of point sources for which a general permit rule exists, except:

(1) as provided under section 6 or 9 of this rule or the applicable general permit rule; and

(2) point source discharges meeting the applicability requirements of a general permit rule, who are already subject to individual NPDES permits prior to the effective date of a general permit rule.

(b) Persons excluded from general permit rule regulation solely because they have an existing individual NPDES permit may request to be regulated under a general permit rule and

may request that the individual NPDES permit be revoked or modified to remove the point source from the existing permit. Upon revocation or expiration of the individual NPDES permit, the general permit rule shall apply to such point source discharges regulated under this article. **This allowance to change from an individual NPDES permit to a general NPDES permit does not apply to municipal separate storm sewer system permittees who were issued an individual NPDES permit before January 1, 2000.**

(c) A person that holds an individual NPDES permit may have discharges regulated under an applicable general permit rule if such discharges are not addressed in the individual permit. (*Water Pollution Control Board; 327 IAC 15-2-3; filed Aug 31, 1992, 5:00 p.m.: 16 IR 17*)

SECTION 2. 327 IAC 15-2-6 IS AMENDED TO READ AS FOLLOWS:

327 IAC 15-2-6 Exclusions

Authority: IC 13-14-8; IC 13-14-9; IC 13-15-1-2; IC 13-15-2-1; IC 13-18-3

Affected: IC 13-11-2; IC 13-18-4

Sec. 6. (a) **Except as provided in subsection (b),** an individual NPDES permit issued under 327 IAC 5 is required for a discharge to a receiving stream identified as an outstanding state resource water, an exceptional use water, or an outstanding national resource water as defined under 327 IAC 2-1-2(3), 327 IAC 2-1-11(b), or 327 IAC 2-1.5-4 or which would significantly lower the water quality, as defined under 327 IAC 5-2-11.3(b)(1) of such a water downstream of the point source discharge. ~~This section does not apply to a permittee discharger covered under 327 IAC 15-5, 327 IAC 15-6, or 327 IAC 15-13 that discharges into an outstanding national resource water, outstanding state resource water or an exceptional use state water. A permittee discharger, covered under subject to 327 IAC 15-5, 327 IAC 15-6, or 327 IAC 15-13, that discharges into an outstanding national resource water, outstanding state resource water or an exceptional use state water, may be issued a general permit.~~

(b) A discharge to an outstanding national resource water, outstanding state resource water or exceptional use water may be permitted under 327 IAC 15-5, 327 IAC 15-6, or 327 IAC 15-13 if the commissioner determines the discharge will not significantly lower the water quality, as defined under 327 IAC 5-2-11.3(b)(1) of such a water downstream of the point source discharge.

(*Water Pollution Control Board; 327 IAC 15-2-6; filed Aug 31, 1992, 5:00 p.m.: 16 IR 17; filed Jan 14, 1997, 12:00 p.m.: 20 IR 1476*)

SECTION 3. 327 IAC 15-2-8 IS AMENDED TO READ AS FOLLOWS:

327 IAC 15-2-8 ~~Nontransferability~~ Transferability of notification requirements; time limits for individual NPDES permit application

Authority: IC 13-14-8; IC 13-14-9; IC 13-15-1-2; IC 13-15-2-1; IC 13-18-3
Affected: IC 4-22-2; IC 13-11-2; IC 13-18-4

Sec. 8. (a) **Unless other requirements are found within specific rules under this article**, compliance with the NOI letter submission requirements under this article may ~~not be transferred~~ **if the following occurs**. ~~If ownership/operation of a facility is transferred to a new person, that person must submit a NOI letter pursuant to 327 IAC 15-3 or the applicable general rule, or seek coverage under an individual NPDES permit pursuant to 327 IAC 5-~~

(1) **The current permittee notifies the commissioner at least thirty (30) days in advance of the**

(2) **A written agreement containing a specific date for transfer of permit responsibility and coverage between the current permittee and the transferee (including acknowledgment that the existing permittee is liable for violations up to that date, and that the transferee is liable for violations from that date on) is submitted to the commissioner.**

(3) **The transferee certifies in writing to the commissioner intent to operate the facility without making such material and substantial alterations or additions to the facility as would significantly change the nature or quantities of pollutants discharged.**

(b) ~~A person who filed a NOI letter under this article and who subsequently was requested by the commissioner to file an application for an individual NPDES permit has one hundred twenty (120) days from the time of the request by the commissioner to file the application.~~ **The commissioner may require that a new NOI letter be submitted rather than agreeing to the transfer of the NOI letter requirements.** (*Water Pollution Control Board; 327 IAC 15-2-8; filed Aug 31, 1992, 5:00 p.m.: 16 IR 18*)

SECTION 4. 327 IAC 15-2-9 IS AMENDED TO READ AS FOLLOWS:

327 IAC 15-2-9 Special requirements for NPDES general permit rule

Authority: IC 13-14-8; IC 13-14-9; IC 13-15-1-2; IC 13-15-2-1; IC 13-18-3
Affected: IC 4-21.5; IC 13-11-2; IC 13-18-4

Sec. 9. (a) If a general permit rule is amended, all persons regulated by the affected general permit rule must be notified by first class mail of the amendment by the commissioner ~~within sixty (60) days after the effective date of the amended rule.~~ Those persons notified by the commissioner under this subsection shall:

(1) apply for an individual NPDES permit under 327 IAC 5-3 ~~within one hundred twenty (120) days after the effective date of the amended rule;~~ or

(2) submit a **complete** NOI letter containing the information required in 327 IAC 15-3-2 ~~or the applicable general rule,~~ and the amended rule;

~~within ninety (90) days after the effective date of the amended rule~~ **receipt of the notice from the commissioner.**

(b) The commissioner may require any person either with an existing discharge subject to the requirements of this article or who is proposing a discharge that would otherwise be subject to the requirements of this article to apply for and obtain an individual NPDES permit if one (1) of the six (6) cases listed in this subsection occurs. Interested persons may petition the commissioner to take action under this subsection. Cases where individual NPDES permits may be required include the following:

(1) The applicable requirements contained in this article are not adequate to ensure compliance with:

- (A) water quality standards under 327 IAC 2-1 or 327 IAC 2-1.5; or
- (B) the provisions that implement water quality standards contained in 327 IAC 5.

(2) The person is not in compliance with the terms and conditions of the general permit rule.

(3) A change has occurred in the availability of demonstrated technology or practices for the control or abatement of pollutants from the point source.

(4) Effluent limitations guidelines that are more stringent than the requirements in the general permit rule are subsequently promulgated for point sources regulated by the general permit rule.

(5) A water quality management plan containing more stringent requirements applicable to such point source is approved.

(6) Circumstances have changed since the activity regulated under this article began so that the discharger is no longer appropriately controlled under the general permit rule, or either a temporary or permanent reduction or elimination of the authorized discharge is necessary.

(c) If, under subsection (b), the commissioner requires an individual NPDES permit, pursuant to 327 IAC 5-3, the commissioner shall notify the person in writing that an individual NPDES permit application is required. This notice shall be issued pursuant to IC 4-21.5 and shall also include the following:

(1) A brief statement of the reasons for this decision.

(2) An application form.

(3) A statement setting a time for the person to file the application.

(4) A statement that on the effective date of the individual NPDES permit, the general permit rule, as it applies to the individual person, shall no longer apply.

The commissioner may grant additional time upon request of the applicant for completion of the application.

(d) ~~An operator, as defined in 327 IAC 15-5-4(7), of a storm water discharge~~ **A person having financial responsibility or operational control for a facility, project site, or municipal separate storm sewer system area and the associated storm water discharges**, that meets the applicability requirements of the general permit rule and is not covered by an existing individual NPDES permit, must submit an application under 40 CFR 122.26 as published in the Federal Register on November 16, 1990, and 327 IAC 5-3 if the operator seeks to cover the discharge under an individual permit.

(e) On the effective date of an individual NPDES permit that is issued to a person regulated under this article, this article no longer applies to that person.

(f) Persons with a discharge meeting all the applicability criteria of more than one (1) general permit rule shall comply with all applicable general permit rules. (*Water Pollution Control Board; 327 IAC 15-2-9; filed Aug 31, 1992, 5:00 p.m.: 16 IR 18; errata filed Sep 10, 1992, 12:00 p.m.: 16 IR 65; errata, 16 IR 751; filed Jan 14, 1997, 12:00 p.m.: 20 IR 1476*)

SECTION 5. 327 IAC 15-3-1, AS READOPTED AT 24 IR 1518, IS AMENDED TO READ AS FOLLOWS:

327 IAC 15-3-1 Purpose

Authority: IC 13-14-8; IC 13-14-9; IC 13-15-1-2; IC 13-15-2-1; IC 13-18-3
Affected: IC 13-11-2; IC 13-18-4

Sec. 1. The purpose of this rule is to establish the requirements and procedures for submitting ~~a~~**an** NOI letter under a general permit rule. **Unless otherwise specified under an applicable general permit rule**, the NOI letter shall be sent to the following address:

Indiana Department of Environmental Management
Office of Water ~~Management~~ **Quality**
~~105 South Meridian Street~~ **100 North Senate Avenue**
P.O. Box 6015
Indianapolis, Indiana 46206
Attention: Permits Section, General Permit Desk

(*Water Pollution Control Board; 327 IAC 15-3-1; filed Aug 31, 1992, 5:00 p.m.: 16 IR 19; readopted filed Jan 10, 2001, 3:23 p.m.: 24 IR 1518*)

SECTION 6. 327 IAC 15-3-2, AS READOPTED AT 24 IR 1518, IS AMENDED TO READ AS FOLLOWS:

327 IAC 15-3-2 Content requirements of a NOI letter

Authority: IC 13-14-8; IC 13-14-9; IC 13-15-1-2; IC 13-15-2-1; IC 13-18-3
Affected: IC 13-11-2; IC 13-18-4

Sec. 2. **Except for permittees covered under 327 IAC 15-5 and 327 IAC 15-13,** the NOI letter shall include the following:

- (1) Name, mailing address, and location of the facility for which the notification is submitted.
- (2) Standard Industrial Classification (SIC) codes, as defined in 327 IAC 5, up to four (4) digits, that best represent the principal products or activities provided by the facility.
- (3) The person's name, address, telephone number, **e-mail address (if available)**,

ownership status, and status as federal, state, private, public, or other entity.

(4) The latitude and longitude of the approximate center of the facility to the nearest fifteen (15) seconds, **and, if the section, township, and range are provided,** ~~or the nearest quarter section (if the section, township, and range are provided)~~ in which the facility is located.

(5) The name of receiving water, or, if the discharge is to a municipal separate storm sewer, the name of the municipal operator of the storm sewer and the ultimate receiving water.

(6) A description of how the facility complies with the applicability requirements of the general permit rule.

(7) Any additional NOI letter information required by the applicable general permit rule.

(8) The NOI letter must be signed by a person meeting the signatory requirements in 327 IAC 15-4-3(g).

(Water Pollution Control Board; 327 IAC 15-3-2; filed Aug 31, 1992, 5:00 p.m.: 16 IR 19; errata filed Sep 10, 1992, 12:00 p.m.: 16 IR 65; readopted filed Jan 10, 2001, 3:23 p.m.: 24 IR 1518)

SECTION 7. 327 IAC 15-3-3, AS READOPTED AT 24 IR1518, IS AMENDED TO READ AS FOLLOWS:

327 IAC 15-3-3 Deadline for submittal of a NOI letter; additional requirements

Authority: IC 13-14-8; IC 13-14-9; IC 13-15-1-2; IC 13-15-2-1; IC 13-18-3

Affected: IC 13-11-2; IC 13-18-4

Sec. 3. (a) Any person proposing a new discharge that will be subject to a general permit rule, except for construction activity under 327 IAC 15-5 **and municipal separate storm sewer system discharges under 327 IAC 15-13**, shall submit ~~a~~ **an** NOI letter and additional information as required by the applicable general permit rule at least one hundred eighty (180) days before the date on which the discharge is to commence unless permission for a later date has been granted by the commissioner or is established in the applicable general permit rule. A construction activity NOI letter shall be submitted in accordance with 327 IAC 15-5-6. **A municipal separate storm sewer system NOI letter shall be submitted in accordance with 327 IAC 15-13-6 and 327 IAC ~~15-13-7~~ 15-13-9.**

(b) Any person ~~operating~~ **requesting** coverage under a general permit rule with an existing discharge shall submit ~~a~~ **an** NOI letter within ninety (90) days of the effective date of the applicable general permit rule, unless permission for a later date has been granted by the commissioner or is established in **327 IAC 15-2-9(a)(3) or** the applicable general permit rule.
(Water Pollution Control Board; 327 IAC 15-3-3; filed Aug 31, 1992, 5:00 p.m.: 16 IR 19; errata filed Sep 10, 1992, 12:00 p.m.: 16 IR 65; errata, 16 IR 898; readopted filed Jan 10, 2001, 3:23 p.m.: 24 IR 1518)

SECTION 8. 327 IAC 15-5-1, AS READOPTED AT 24 IR 1518, IS AMENDED

TO READ AS FOLLOWS:

327 IAC 15-5-1 Purpose

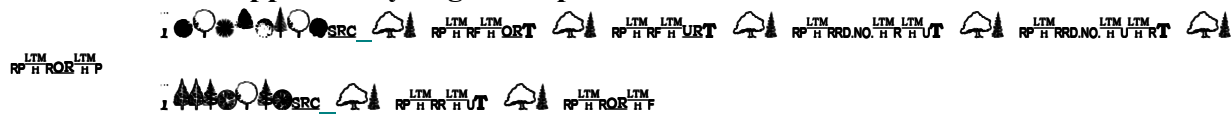

Authority: IC 13-14-8; IC 13-14-9; IC 13-15-1-2; IC 13-15-2-1; IC 13-18-3

Affected: IC 13-11-2; IC 13-18-4

Sec. 1. The purpose of this rule is to ~~reduce~~ **minimize** pollutants principally sediment as a result of soil erosion, ~~in establish requirements for storm water discharges into surface waters of the state from sites where construction activity disturbs five (5) acres or more of the site. However, in contemplation of recent federal court decisions, persons with sites greater than one (1) acre but less than five (5) acres are invited to comply with this rule as well. from construction and land disturbing activities and the resulting completed project.~~ activities of one (1) acre or more so that the public health, existing water uses, and aquatic biota are protected. (*Water Pollution Control Board; 327 IAC 15-5-1; filed Aug 31, 1992, 5:00 p.m.: 16 IR 23; errata, 16 IR 898; readopted filed Jan 10, 2001, 3:23 p.m.: 24 IR 1518*)

SECTION 9. 327 IAC 15-5-2, AS READOPTED AT 24 IR 1518, IS AMENDED TO READ AS FOLLOWS:

327 IAC 15-5-2 Applicability of general permit rules

Sec. 2. (a) The requirements under this rule apply to all persons who:

- (1) do not obtain an individual NPDES permit under 327 IAC 15-2-6;
- (2) meet the general permit rule applicability requirements under 327 IAC 15-2-3; and
- (3) are involved in: construction ~~which includes clearing, grading, excavation, and other land disturbing activities, or land disturbing activity~~, except operations that result in the ~~land~~ disturbance of less than ~~five (5) acres~~ **one (1) acre** of total land area **as determined under section 5.5 subsection (h) of this rule-section** and which are not part of a larger common plan of development or sale.

(b) The requirements under this rule do not apply to persons who:

- (1) are involved in agricultural land disturbing activities; or
- (2) are involved in forest harvesting activities; ~~or~~
- (3) ~~are involved in construction activities associated with a single family residential dwelling, when the dwelling is not part of a larger common plan of development or sale.~~

(c) The requirements under this rule do not apply to the following activities, provided other applicable permits contain provisions requiring immediate implementation of soil erosion control measures:

- (1) Landfills that have been issued a certification of closure under 329 IAC 10.
- (2) Coal mining activities permitted under IC 14-34.
- (3) Municipal solid waste landfills that are accepting waste pursuant to a permit issued by the department under 329 IAC 10 that contains equivalent storm water requirements, including the expansion of landfill boundaries and construction of new cells either within or outside the original solid waste permit boundary.

~~(b)(d)~~ ~~In general,~~ It will be the responsibility of the ~~operator~~ project site owner to complete a sufficient notice of intent letter and ensure that a sufficient construction plan is completed and submitted in accordance with section 6 of this rule. It will be the responsibility of the project site owner to ensure compliance with this rule during the construction activity and implementation of the construction plan, and to notify the department with a sufficient notice of termination letter. However, all persons engaging in construction and land disturbing activities on a permitted project site ~~meeting the applicability requirements~~ must comply with the requirements of this rule.

~~(e)(e)~~ For off-site construction and land disturbing activities that will provide services (for example, road extensions, sewer, water, and other utilities) to a permitted project site, these off-site activity areas must be considered as a part of the permitted project site, when the activity is under the control of the ~~operator of the permitted~~ project site owner.

~~(d)(f)~~ For an individual lot within a project site permitted under this rule, and where land disturbance is expected to be one (1) acre or more, the ~~new operator must file their own general permit as required by this rule.~~ individual lot owner must complete their own notice of intent letter, apply for a permit under this rule, and ensure that a sufficient construction plan is completed and submitted in accordance with section 6 of this rule.

~~(e)(g)~~ An individual lot ~~disturbing less than one acre~~ within a permitted project site, where the land disturbance is less than one (1) acre, is considered part of the permitted project site, and the individual lot operator must comply with the provisions and requirements of the plan developed by the ~~operator~~ project site owner and section 9-7.5 of this rule. Submittal of a ~~general permit~~ notice of intent and construction plans is not required for each an individual lot within a permitted project site that has less than one (1) acre of land disturbance. Strip developments will be considered as one (1) project site and must comply with this rule unless the total combined disturbance on all individual lots is less than one (1) acre and is not part of a larger common plan of development or sale.

The language in (h) has been moved from SECTION 13 of the second notice draft rule at 327 IAC 15-5-5.5 and is not new language.

(h) To determine if multi-lot project sites are regulated by this rule, the area of land disturbance shall be calculated by adding the total area of land disturbance for

improvements, such as, roads, utilities, or common areas, and the expected total disturbance on each individual lot, as determined by the following:

- (1) For a single-family residential project site where the lots are one-half (0.5) acre or more, one-half (0.5) acre of land disturbance must be used as the expected lot disturbance.
 - (2) For a single-family residential project site where the lots are less than one-half (0.5) acre in size, the total lot must be calculated as being disturbed.
 - (3) To calculate lot disturbance on all other types of projects project sites, such as industrial and commercial projects project sites, a minimum of one (1) acre of land disturbance must be used as the expected lot disturbance, unless the lots are less than one (1) acre in size, in which case the total lot must be calculated as being disturbed.
- (i) Submittal of a notice of intent and construction plans is not required for construction activities associated with a single family residential dwelling disturbing ~~one (1) acre or more~~ less than five (5) acres, when the dwelling is not part of a larger common plan of development or sale. Provisions in section (7)(a)(1) through (7)(a)(5) and section (7)(a)(10) through (7)(a)(19) of this rule shall be complied with throughout construction activities and until the areas are permanently stabilized.

(i)(j) The department may waive the permit requirements under this rule for construction site operators to obtain a permit if activities that disturb less than five acres where the waiver applicant, determined by the commissioner, certifies that:

- (1) a total maximum daily load (TMDL) for the pollutant(s) of concern from storm water discharges associated with construction activity indicates that controls on construction site discharges are not needed to protect water quality; or
- (2) a site discharging to non-impaired waters that does not require TMDLs by an equivalent analysis which demonstrates water quality is not threatened by storm water discharges has determined allocations for small construction sites for the pollutant(s) of concern or determined that such allocations are not needed to protect water quality based on consideration of existing in-stream concentrations, expected growth in pollutant contributions from all sources, and a margin of safety.

(Water Pollution Control Board; 327 IAC 15-5-2; filed Aug 31, 1992, 5:00 p.m.: 16 IR 23; readopted filed Jan 10, 2001, 3:23 p.m.: 24 IR 1518)

SECTION 10. 327 IAC 15-5-3, AS READOPTED AT 24 IR 1518, IS AMENDED TO READ AS FOLLOWS:

327 IAC 15-5-3 General permit rule boundary

This term does not include routine ditch maintenance or minor landscaping projects.

~~(4)~~(6) **"Construction plan"** means a representation of a ~~construction~~ project site and all activities associated with the project. The plan includes the location of the project site, buildings, and other infrastructure, grading activities, schedules for implementation and other pertinent information related to the project site. A storm water pollution prevention plan is a part of the construction plan.

(7) **"Construction site access"** means a stabilized stone surface at all points of ingress or egress to a project site, for the purpose of capturing and detaining sediment carried by tires of vehicles or other equipment entering or exiting the project site.

(8) **"Department"** refers to the department of environmental management.

~~(5)~~(9) **"Developer"** means:

- (A) any person financially responsible for construction activity; or
- (B) an owner of property who sells or leases, or offers for sale or lease, any lots in a subdivision.

~~(6)~~(10) **"DNR,—DSC"** means the division of soil conservation of the department of natural resources.

~~(2)~~(11) **"Erosion"** means the detachment and movement of soil, sediment, or rock fragments by water, wind, ice, or gravity.

~~(3)~~(12) **"Erosion and sediment control measure"** means a practice, or a combination of practices, to control erosion and resulting sedimentation and/or off-site damages.

~~(4)~~ **"Erosion control plan"** means a written description and site plan of pertinent information concerning erosion control measures.

~~(9)~~(13) **"Erosion and sediment control system"** means ~~a combination~~ the use of appropriate erosion and sediment control measures ~~that address the deposition of sediment~~ to minimize sedimentation by first reducing sediment or eliminating erosion at the source as well as at the point of discharge from the site and then as necessary, trapping sediment to prevent it from being discharged from or within a project site.

~~(10)~~ **"First flush"** means ~~the delivery of a disproportionately large load of pollutants during the early part of storms due to rapid run-off of accumulated pollutants.~~

~~(11)~~ **"Fugitive dust"** means ~~the generation of particulate matter to the extent that some portion of the material escapes beyond the property line or boundaries of the property, right-of-way, or easement on which the source is located.~~

(14) **"Grading"** means the cutting and filling of the land surface to a desired slope or elevation.

~~(12)~~(15) **"Impervious surface"** means surfaces, such as pavement and rooftops, which prevent the infiltration of storm water into the soil.

(13)(16) **"Individual building lot"** means a single parcel of land within a multi-parcel development.

(17) **"Individual lot operator"** means a contractor or subcontractor working on an individual lot.

(18) “Individual lot owner” means a person who has financial control of construction activities for an individual lot.

(5) (14)(19). “Land disturbing activity” means any manmade change of the land surface, including removing vegetative cover **that exposes the underlying soil,** excavating, filling, transporting, and grading. ~~In the context of this rule, agricultural land disturbing activities, coal mining activities permitted by the DNR under IC 13-4.1, and active landfills permitted by the Indiana department of environmental management where the permit requires soil erosion control are excluded. For purposes of this rule, the term does not include the following activities, provided other applicable permits contain provisions requiring immediate implementation of soil erosion control measures:~~

(A) Agricultural land disturbing activities.

(B) Landfills that have been issued a certification of closure under 329 IAC 10.

(C) Coal mining activities permitted under IC 14-34.

(D) Landfills that are accepting waste pursuant to a permit issued by the department under 329 IAC 10, except that expansions of landfill boundaries and construction of new cells either within or outside the original solid waste permit boundary is not considered part of the 13-4.1, and active landfill and is subject to this rule until the cell is certified to take waste.

(15)(20) “Larger common plan of development or sale” means a plan, undertaken by a single developer project site owner or a group of developers project site owners acting in concert, to offer lots for sale or lease; where such land is contiguous, or is known, designated, purchased or advertised as a common unit or by a common name, such land shall be presumed as being offered for sale or lease as part of a larger common plan. The term also includes phased or other construction activity by a single entity for its own use.

(21) “Measurable storm event” means a precipitation event which results in a total measured precipitation accumulation equal to, or greater than, one-half (0.5) inch of rainfall.

(16)(22) “Municipal separate storm sewer system” or “MS4” means an area designated by has the department under same meaning set forth at 327 IAC 15-1315-13-5(42).

(17)(23) “MS4 area” means a land area comprising one (1) or more places that receives coverage under one (1) NPDES storm water permit regulated by 327 IAC 15-13 or 327 IAC 5-4-6(a)(3) and 327 IAC 5-4-6(a)(4).

(18)(24) "MS4 operator" means the person responsible for development, implementation, or enforcement of the minimum control measures for a designated MS4 area regulated under 327 IAC 15-13.

(19) ~~"Natural and cultural resources" means resources that are identified as unique, endangered, or high quality natural communities of plant, animal or insect species, unique natural habitats, and areas of historical and archeological value.~~

(6) ~~"Nonagricultural land use" means commercial use of land for the manufacturing and wholesale or retail sale of goods or services, residential or institutional use of land intended primarily to shelter people, highway use of land including lanes, alleys, and streets, and other land uses not included in agricultural land use.~~

(24)(25) "Peak discharge" means the maximum rate of flow during a storm, usually in reference to a specific design storm event.

(22)(26) "Permanent stabilization" means the establishment, at a uniform density of seventy percent (70%) across the disturbed area, of vegetative cover or permanent non-erosive material that will ensure the resistance of the soil to erosion, sliding, or other movement.

(23)(27) "Phasing of construction" means sequential development of smaller portions of a large project site, stabilizing each portion before beginning land disturbance on subsequent portions, to minimize exposure of disturbed land to erosion.

(28) "Project site" means the entire area on which construction activity is to be performed.

(7)(20)(29) "Project site owner Operator" means the person required to submit the NOI letter under this article, and required to comply with the terms of this rule including the following:

(A) A developer; or

(B) A person who has financial and operational control of construction ~~or land disturbing~~ activities, and project plans and specifications, including the ability to make modifications to those plans and specifications.

(30) "Sediment" means solid material (both mineral and organic) that is in suspension, is being transported, or has been moved from its site of origin by air, water, gravity, or ice and has come to rest on the earth's surface.

(25)(31) "Sedimentation" means the settling and accumulation of unconsolidated ~~material~~ sediment carried by storm water run-off.

(8) ~~(26) "Site" means the entire area included in the legal description of the land on which construction or land disturbing activity is to be performed. Individual lots, where disturbance is less than one (1) acre, within the site are considered part of the permitted project and must comply with the storm water pollution prevention plan developed by the operator. For purposes of this rule, strip developments will be considered as one (1) site and must comply with this rule unless the total combined disturbance on all lots is less than one (1) acre and is not part of a larger common plan of development or sale.~~

(32) "Soil" means the unconsolidated mineral and organic material on the surface of the earth that serves as the natural medium for the growth of plants.

~~(27)~~(33) "Soil and Water Conservation District" or "SWCD" means a political subdivision established under IC 14-32.

~~(28) "Stable construction entrance" means a stabilized stone surface at a point of ingress or egress to a construction site, for the purpose of capturing and detaining sediment carried by tires or tracks of vehicles or other equipment entering or exiting the site.~~

~~(29)~~(34) "Storm water pollution prevention plan" means a plan developed to minimize the impact of storm water pollutants, ~~including fugitive dust and storm water run-off~~, resulting from construction and land disturbing activities.

~~(30)~~(35) "Storm water quality measure" means a practice, or a combination of practices, to control or minimize pollutants associated with storm water run-off.

~~(31)~~(36) "Strip development" means a multi-lot project where building lots front on an existing road.

~~(32)~~(37) "Subdivision" means any land that is divided or proposed to be divided into lots, whether contiguous or subject to zoning requirements, for the purpose of sale or lease as part of a larger common plan of development or sale.

~~(33)~~(38) "Temporary stabilization" means the covering of soil to ensure its resistance to erosion, sliding, or other movement. The term includes vegetative cover, anchored mulch, or other nonerosive material applied at a uniform density of seventy percent (70%) across the disturbed area.

~~(34)~~(39) "Tracking" means the deposition of soil material that is transported from one (1) location to another by tires and or, tracks of vehicles or other equipment and then deposited.

~~(40)~~ "Trained Individual" means an individual who is trained and experienced in the principles of storm water quality, including erosion and sediment control as may be demonstrated by state registration, professional certification, experience, or completion of coursework that enable the individual to make judgements regarding storm water control or treatment and monitoring.

(Water Pollution Control Board; 327 IAC 15-5-4; filed Aug 31, 1992, 5:00 p.m.: 16 IR 23; readopted filed Jan 10, 2001, 3:23 p.m.: 24 IR 1518)

SECTION 12. 327 IAC 15-5-5, AS READOPTED AT 24 IR 1518, IS AMENDED TO READ AS FOLLOWS:

327 IAC 15 5-5 Additional Notice of intent (NOI) letter requirements

Authority: IC 13-14-8; IC 13-15-1-2; IC 13-15-2; IC 13-18-3; IC 13-18-4

Affected: IC 13-12-3-1; IC 13-18-1

Sec. 5. ~~(a) In addition to the notice of intent (NOI) letter requirements, under 327 IAC 15-3,~~ The following information must be submitted by the ~~operator~~ **project site owner** with a **complete** NOI letter under this rule:

(1) Name, mailing address, and location of the project site for which the notification is submitted.

(2) The project site owner's name, address, telephone number, e-mail address (if

available), ownership status as federal, state, public, private or other entity.

(3) **Contact person (if different than project site owner), person's name, company name, address, e-mail address (if available), and telephone number.**

(4) ~~(1)~~ A brief description of the construction project, including, ~~but not limited to,~~ a statement of the total acreage of the **project site. Total acreage claimed in the NOI letter shall be consistent with the acreage covered in the construction plan.**

(5) ~~(2)~~ **Estimated timetable dates for initiation and completion of construction or land-disturbing activities, and installation of erosion control measures. Within forty-eight (48) hours of the initiation of construction activity, the project site owner must notify the commissioner and the appropriate plan reviewing agency of the actual project start date.**

~~(3)~~(6) **The latitude and longitude of the approximate center of the project site to the nearest fifteen (15) seconds, and the nearest quarter section, township, range, and civil township in which the project site is located.**

~~(4)~~(7) **Total impervious surface area, in square feet, of the final project site including structures, roads and, parking lots, and other similar improvements.**

~~(3)~~ Statement of ~~(5)~~(8) **The number of acres to be involved in the construction or land-disturbing activities.**

~~(5)~~(6)(9) **Proof of publication in a newspaper of general circulation in the affected area that notified the public that a construction or land-disturbing activity under this rule is to commence, that states, "(Company name, address) is submitting an NOI letter to notify the Indiana Department of Environmental Management of our intent to comply with the requirements under 327 IAC 15-5 to discharge storm water from construction activities for the following project: (name of the construction project, address of the location of the construction project). Run-off from the project site will discharge to (stream(s) receiving the discharge(s))".**

(10) **As applicable, a list of all MS4 areas designated under 327 IAC 15-13 within which the project occurs site lies.**

~~(4)~~ (8)(11) **A written certification by the operator that:**

(A) ~~the erosion control~~ **storm water quality** measures included in the ~~erosion control~~ **construction** plan comply with the requirements under sections ~~6.5, 7, and 87.5, 9, and 11~~ of this rule and that the **storm water pollution prevention** plan complies with all applicable **federal, state, county, or and** local ~~erosion control~~ **storm water** requirements;

(B) ~~the erosion control~~ measures **required by section 87 of this rule** will be implemented in accordance with the ~~approved~~ **storm water pollution prevention** plan;

(C) ~~verification that an appropriate state, county, or local erosion control authority and~~ **if the projected land disturbance is five (5) one (1) acres or more, the applicable soil and water conservation district, office have or other entity designated by the department, has been sent a copy of the construction plan for review; and**

(D) **storm water quality measures beyond those specified in the storm**

water pollution prevention plan will be implemented during the life of the permit if necessary to comply with section 87 of this rule; and
~~(D) verification that~~ (E) implementation of the erosion control plan storm water quality erosion control plan measures will be conducted supervised inspected by personnel trained in erosion control practices. trained individuals.

(12) The name of receiving water, or, if the discharge is to a municipal separate storm sewer, the name of the municipal operator of the storm sewer and the ultimate receiving water.

(13) The NOI letter must be signed by a person meeting the signatory requirements in 327 IAC 15-4-3(g).

(14) A notification from the SWCD, DNR-DSC or other entity designated by the department as the reviewing agency indicating that the constructions plans are sufficient to comply with this rule.

~~(b) The commissioner or the commissioner's designated representative shall compare the location of the project to all applicable natural and cultural resource information sources to verify whether potential impacts are present. If potential impacts are present, additional information may be requested to further evaluate the site, and modifications to the project may be required.~~

(b) Send NOI letters to:
Attention: Rule 5 Storm Water Coordinator
Indiana Department of Environmental Management
Office of Water Quality, Urban Wet Weather Section
100 North Senate Avenue
P.O. Box 6015
Indianapolis, Indiana 46206-6015

(Water Pollution Control Board; 327 IAC 15-5-5; filed Aug 31, 1992, 5:00 p.m.: 16 IR 24; errata filed Sep 10, 1992, 12:00 p.m.: 16 IR 65; readopted filed Jan 10, 2001, 3:23 p.m.: 24 IR 1518)

The text from this section "Land disturbance calculation" was moved to the applicability section at 15-5-2 in the draft rule.

SECTION 13. 327 IAC 15-5-5.5

(Text moved)

SECTION 13. 327 IAC 15-5-6, AS READOPTED AT 24 IR 1518, IS AMENDED TO READ AS FOLLOWS:

327 IAC 15-5-6 Submittal of an NOI letter and construction plans

Authority: IC 13-14-8; IC 13-15-1-2; IC 13-15-2; IC 13-18-3; IC 13-18-4

Affected: IC 13-12-3-1; IC 13-18-1

Sec. 6. (a) ~~After the project site owner has received notification from the reviewing agency that the construction plans meet the requirements of the rule or the review period outlined in Section 6)b)(3) has expired, all NOI letter information required under 327 IAC 15-3 and section 5 of this rule shall be submitted to the commissioner at least thirty (30) days~~ **forty eight (48) hours** prior to the initiation of land disturbing activities **at the site. The operator shall also submit additional project information as required by subsections (b) through (e), unless the applicant provides justification and permission for a fewer number of days has been granted by the commissioner.** A copy of the completed NOI letter must be submitted to all SWCDs, or other entity designated by the department, where the land disturbing activities are to occur. If the NOI letter is determined to be deficient, the project site owner must address the deficient items and submit an amended NOI letter to the commissioner at the address specified in section 5 of this rule.

(b) For a project site where the proposed land disturbance is ~~five (5)~~ **one (1)** acres or more as determined under section ~~5.5~~ **2** of this rule, the following requirements must be met:

(1) The following information must be submitted:

(A) ~~A copy of the completed NOI letter must be submitted to all SWCDs, or other entity designated by the department, where the construction and land disturbing activities are to occur.~~

(B) A construction plan, including the storm water pollution prevention plan, which meets the requirements of ~~section~~ **sections 6.5, 7, and 7.5** of this rule, must be submitted a minimum of ~~sixty (60)~~ **thirty (30)** days prior to the ~~proposed~~ initiation of any land disturbing activities. ~~The plan must be submitted to the appropriate SWCD, or other entity designated by the department for review and verification that the plan meets the requirements of the rule. If the land disturbing construction activity will occur in more than one (1) SWCD, the operator project site owner may request a single coordinated review in accordance with subsection (e)(d)(c)(3).~~

(2) ~~Following receipt of~~ **If the construction plan under subdivision (1) is determined to be deficient, the SWCD, DNR, -DSC technical representative, or other entity designated by the department shall review the contents of the construction plan. If the plan is determined to be deficient, the reviewing entity as the reviewing agency may require modifications, terms, and conditions as necessary to approve the plan meet the requirements of the rule. The initiation of construction activity following notification by the reviewing agency that the plan does not meet the requirements of the rule is a violation and subject to enforcement action. If notification of a deficient plan is received after the**

~~thirty (30) day review period outlined in section 6(b)(3) and following commencement of construction activities, the plans must be modified to meet the requirements of the rule and re-submitted within fourteen (14) days of receipt of the notification of deficient plans. If the project site owner receives notification from the reviewing agency that the plan meets the requirements of the rule prior to the expiration of the thirty (30) day review period, the project site owner may initiate land disturbing activities.~~

~~(3) A plan submitted under subdivision (1) will be approved if the contents meet the minimum standards for compliance with this rule. The plan must be approved by a technical representative of the SWCD, DNR, DSC, or other entity designated by the department prior to the initiation of any land disturbing activity.~~ (3) If the project site owner receives notification from the reviewing agency that the plan meets the requirements of the rule prior to the expiration of the thirty (30) day review period, within thirty (30) days after the plan is received by the reviewing agency, the project site owner may submit the NOI letter information the project site owner may initiate land disturbing activities.

(e) For a project where land disturbance is equal to or greater than one (1) acre, but less than five (5) acres as determined under section 5.5 of this rule, the following requirements must be met:

(1) The following information must be submitted:

(A) A copy of the completed NOI letter must be submitted to all SWCDs or other designated entity or entities where the land disturbing activity is to occur.

(B) A construction plan, including the storm water pollution prevention plan, which meets the requirements of sections 7, 8, 9, and 11 of this rule, must be submitted a minimum of sixty (60) days prior to the proposed initiation of any land disturbing activities. The plan must be submitted to the appropriate SWCD, or other entity designated by the department. If the land disturbing activity will occur in more than one (1) SWCD, the operator may request a single coordinated review in accordance with subsection (e)(3). Upon request of the commissioner or the commissioner's designated representative, the operator must make the plan available for review within forty-eight (48) hours.

(2) Upon review, if the plan is determined to be deficient, the SWCD, the DNR, DSC, or other designated entity may require modifications, terms, and conditions as necessary to approve the plan or to initiate changes in on-site operations.

~~(3) A plan submitted under subdivision (1) will be approved if the contents meet the minimum standards for compliance with this rule. The plan must be approved by a technical representative of the SWCD, the DNR, DSC, or other entity designated by the department prior to the initiation of any land disturbing activity.~~

~~(d)(3)~~ (4) For a project where construction or land disturbance activity occurs inside an MS4 area regulated under 327 IAC 15-13:

(4)(A) a copy of the completed NOI letter must be submitted to the appropriate MS4 operators; and

~~(2)(B)~~ the operator-project site owner must comply with all appropriate ordinances and regulations within the MS4 area related to storm water discharges. The MS4 operator ordinance will be considered to have the same authority as this rule within the regulated MS4 area.

~~(e)(c)~~ For a project that will occur in more than one (1) jurisdiction, such as an SWCD or regulated MS4 area, the following must be met:

(1) ~~Operators~~ Project site owners of ~~projects~~ project sites occurring in multiple MS4 areas, but not in nondesignated areas, shall submit the information required in subsection ~~(d)(c)~~ to each appropriate MS4 operator.

(2) ~~Operators~~ Project site owners of ~~projects~~ project sites occurring in one (1) or more MS4 areas and ~~also in~~ nondesignated areas shall submit the information required in subsections ~~(b) through~~ and ~~(d)(c)~~ to all appropriate MS4 operators, and the SWCD or other entity designated by the department.

(3) ~~Operators~~ Project site owners of ~~projects~~ project sites occurring in multiple nondesignated areas, but not occurring within an MS4 area, may request a single coordinated review through the DNR,--DSC office at the following address: 402 West Washington Street, Room W265, Indianapolis, Indiana 46204. Upon acceptance of the request, the DNR,--DSC will coordinate the plan review with the appropriate SWCDs and other entities designated by the department.

(Water Pollution Control Board; 327 IAC 15-5-6; filed Aug 31, 1992, 5:00 p.m.: 16 IR 24; readopted filed Jan 10, 2001, 3:23 p.m.: 24 IR 1518)

SECTION 14. 327 IAC 15-5-6.5 IS ADDED TO READ AS FOLLOWS:

327 IAC 15-5-6.5 Requirements for construction plans

Authority: IC 13-14-8; IC 13-15-1-2; IC 13-15-2; IC 13-18-3; IC 13-18-4

Affected: IC 13-12-3-1; IC 13-18-1

Sec. 6.5. (a) ~~An operator~~ For project sites that do not meet the criteria in subsection (b), the project site owner shall develop a set of construction plans. Storm water quality measures included in the plan must achieve the minimum project site requirements as specified in section 87 of this rule and meet the design criteria, standards, and specifications established in the Indiana Stormwater Quality Manual* or similar guidance documents approved for use by the department ~~IDEM and DNR~~.

~~(4)(b)~~ The construction plans must include the following:

(A) Project narrative and supporting documents, including the following information:

~~(A)(i)~~ An index indicating the location, in the construction plans,

of all required items in section 7 6.5~~(b)~~(a)(1) through 7 6.5~~(b)~~(a)(8) of this rule.

~~(B)~~(ii) Copy of the completed ~~notice of intent~~ NOI letter for the project site.

~~(C)~~(iii) Description of the nature and purpose of the project.

~~(D)~~(iv) Legal description of the ~~property~~project site. The description should be to the nearest quarter section, township and range, and include the civil township.

~~(E)~~(v) Soil properties, characteristics, limitations, and hazards ~~that are associated with the site and the development of the project site~~ and the measures that will be integrated into the project to overcome or minimize adverse soil conditions.

~~(F)~~(vi) General construction sequence of how the project site will be built, including phases of the ~~project~~construction.

~~(G)~~(vii) Hydrologic Unit Code (14 Digit) available from the United States Geological Survey (USGS).

~~(H)~~(viii) A reduced plat or project site map showing the lot numbers, lot boundaries, and road layout and names. The reduced map must be legible and submitted on a sheet or sheets no larger than eleven (11) inches by seventeen (17) inches for all phases or sections of the ~~property~~project site.

~~(I)~~(ix) Identification of any other state or federal water quality permits that are required for construction activities associated with the ~~operator's~~ owner's project site.

(2) Vicinity map depicting the project site location in relationship to recognizable local landmarks, towns, and major roads, such as a USGS topographic quadrangle map, or county or municipal road map.

(3) An existing project site layout that must include the following information:

(A) Location and name of all wetlands, lakes, and water courses on, or adjacent to, the project site.

(B) Location of all existing structures on the project site.

(C) One hundred (100) year floodplains, floodway fringes, and floodways. Please note if none exist.

(D) Soil map of the predominant soil types, as determined by the United States Department of Agriculture (USDA), Natural Resources Conservation Service (NRCS) Soil Survey, or an equivalent publication, or as determined by a soil scientist. A soil legend must be included with the soil map.

(E) Identification and delineation of vegetative cover such as grass, weeds, brush, and trees on the project site.

(F) Land use of all adjacent properties.

(G) Existing topography at a contour interval appropriate to indicate drainage patterns.

(4) Final project site layout, including the following information:

- (A) Location of all proposed site improvements, including roads, utilities, lot delineation and identification, proposed structures, and common areas.
 - (B) One hundred (100) year floodplains, floodway fringes, and floodways. Please note if none exist.
 - (C) Proposed final topography, at a contour interval appropriate to indicate drainage patterns.
- (5) A grading plan, including the following information:
- (A) Delineation of all proposed land disturbing activities, including off-site ~~construction~~ activities that will provide services to ~~this~~ the project site.
 - (B) Location of all soil stockpiles and borrow areas.
 - (C) Information regarding any off-site borrow or disposal areas, ~~if applicable~~ that are associated with a project site, and under the control of the project site owner.
 - (D) Existing and proposed topographic ~~contours~~ information.
- (6) A drainage plan, including the following information:
- (A) An estimate of the peak discharge, based on the ten (10) year storm event, of the project site for both preconstruction and postconstruction conditions.
 - ~~(B) Existing and final grades, including dividing lines and direction of flow for all drainage areas located within the project.~~
 - ~~(C)~~(B) Location, size, and dimensions ~~and design calculations~~ of all storm water drainage systems such as culverts, storm sewers, and conveyance channels.
 - ~~(D)~~(C) ~~Potential areas~~ Locations where storm water may enter ~~groundwater~~ be directly discharged into ground water, such as abandoned wells or sinkholes. Please note if none exist.
 - (E)(D) Locations of specific points where storm water discharge will leave the project site.
 - (F)(E) Name of all receiving waters. If the discharge is to a separate municipal storm sewer, identify the name of the municipal operator and the ultimate receiving water.
 - ~~(G)~~(F) Location, size, and dimensions of features such as permanent retention or detention facilities, including existing or manmade wetlands, used for the purpose of storm water management. ~~All design calculations for these facilities must be included.~~
- (7) A storm water pollution prevention plan associated with construction activities. The plan must be designed to, at least, meet ~~or exceed~~ the requirements of sections 87 and 97.5 of this rule and must include the following:
- (A) Location, dimensions, detailed specifications, and construction details of all temporary and permanent storm water quality measures.
 - (B) ~~Design calculations of all structural measures including channels, basins and traps.~~

~~(C)~~ Temporary stabilization plans and sequence of implementation.
~~(D)~~(C) Permanent stabilization plans and sequence of implementation.
~~(E)~~(D) Temporary and permanent stabilization plans shall include the following:

(i) Specifications and application rates for soil amendments and seed mixtures.

~~(ii) Method of seeding.~~

~~(iii) The type, and application rate, and anchoring method for anchored mulch.~~

~~(F)~~(E) Construction sequence describing the relationship between implementation of storm water quality measures and stages of ~~land-disturbing activities and construction activities.~~

~~(G)~~(F) ~~Quality assurance plan procedures~~ Self monitoring program including plan and procedures.

~~(H)~~(G) A description of potential pollutant sources associated with the construction ~~and land-disturbing~~ activities, which may reasonably be expected to add a significant amount of pollutants to storm water discharges.

~~(I)~~(H) Material handling and storage associated with construction activity, spill prevention, and spill response procedures. Spill response procedures must be in accordance with 327 IAC 2-6.1.

(8) The ~~post-construction~~ postconstruction storm water pollution prevention plan. The plan must include the following information:

(A) A description of potential pollutant sources from the proposed land use, which may reasonably be expected to add a significant amount of pollutants to storm water discharges.

(B) Location, dimensions, detailed specifications, and construction details of all postconstruction storm water quality measures.

(C) A description of measures that will be installed to control pollutants in storm water discharges that will occur after construction ~~and land-disturbing operations~~ activities have been completed. Such practices include infiltration of run-off, flow reduction by use of open vegetated swales and natural depressions, buffer strip and riparian zone preservation, filter strip creation, minimization of land disturbance and surface imperviousness, maximization of open space, and storm water retention and detention ponds.

(D) A sequence describing when each postconstruction storm water quality measure will be installed.

(E) Storm water quality measures that will remove or minimize pollutants from ~~the first flush of~~ storm water run-off.

(F) Storm water quality measures that will be implemented to prevent or minimize adverse impacts to stream and riparian habitat ~~and promote groundwater recharge.~~

(G) A narrative description of the maintenance guidelines for all postconstruction storm water quality measures to facilitate their proper long-term function. This narrative description shall be made available to future

parties who will assume responsibility for the operation and maintenance of the postconstruction storm water quality measures.

(b) For a single-family residential development consisting of four (4) or less lots or a single-family residential strip development where the developer offers for sale or lease without land improvements, and the project is not part of a larger common plan of development or sale, the project site owner shall develop a set of construction plans containing storm water quality measures which achieve the minimum project site requirements specified in section 7 of this rule and meet the design criteria, standards, and specifications as established in the “Indiana Stormwater Quality Manual”* or similar guidance documents approved for use by the department and Indiana department of natural resources.

(1) The construction plan must include the following:

(A) Project narrative and supporting documents, including the following information:

- (i) An index indicating the location, in the construction plans, of all required items in section 6.5(b)(1) through 6.5(b)(8) of this rule.
- (ii) Copy of the completed NOI letter for the project site.
- (iii) Description of the nature and purpose of the project.
- (iv) Legal description of the project site. The description should be to the nearest quarter section, township and range, and include the civil township.
- (v) Soil properties, characteristics, limitations, and hazards associated with the project site and the measures that will be integrated into the project to overcome or minimize adverse soil conditions.
- (vi) Hydrologic Unit Code (14 Digit) available from the United States Geological Survey (USGS).
- (vii) Identification of any other state or federal permits that are required for construction activities associated with the project site operator’s project site.

(B) Vicinity map depicting the project site location in relationship to recognizable local landmarks, towns, and major roads, such as a USGS topographic quadrangle map, or county or municipal road map.

(C) A project site layout that must include the following information:

- (i) Location and name of all wetlands, lakes, and water courses on, or adjacent to, the project site.
- (ii) Location of all existing structures on the project site (if applicable).
- (iii) One hundred (100) year floodplains, floodway fringes, and floodways. Please note if none exist.
- (iv) Soil map of the predominant soil types, as determined by the United States Department of Agriculture (USDA), Natural Resources Conservation Service (NRCS) Soil Survey, or an equivalent publication, or as determined by a soil scientist. A soil legend must be included with the soil map.
- (v) Identification and delineation of vegetative cover such as grass,

weeds, brush, and trees on the project site.

(vi) Land use of all adjacent properties.

(vii) Existing and proposed topography at a contour interval appropriate to indicate drainage patterns.

(viii) Location of all proposed site improvements, including roads, utilities, lot delineation and identification, and proposed structures.

(D) A storm water pollution prevention plan associated with construction activities. The plan must be designed to, at least, meet the requirements of sections 7 and 7.5 of this rule and must include the following:

(i) Delineation of all proposed land disturbing activities, including off-site activities that will provide services to the project site.

(ii) Location of all soil stockpiles and borrow areas.

(iii) Location, size, and dimensions of all storm water drainage systems such as culverts, storm sewers, and conveyance channels.

(iv) Locations where storm water may be directly discharged into ground water, such as abandoned wells or sinkholes. Please note if none exist.

(v) Locations of specific points where storm water discharge will leave the project site.

(vi) Name of all receiving waters. If the discharge is to a separate municipal storm sewer, identify the name of the municipal operator and the ultimate receiving water.

(vii) Location, dimensions, detailed specifications, and construction details of all temporary and permanent storm water quality measures.

(viii) Temporary stabilization plans and sequence of implementation of storm water quality measures.

(x) Temporary and permanent stabilization plans shall include the following:

(AA) Specifications and application rates for soil amendments and seed mixtures.

(BB) The type and application rate for anchored mulch.

(xi) Self monitoring program plan and procedures.

(c) The SWCD or the DNR-DSC representative, or other designated entity may upon finding reasonable cause require modification to the construction plan ~~after it has been approved~~, if it is determined that changes are necessary due to site conditions or project design changes. Revised plans, if requested, must be submitted to the appropriate entity within twenty-one (21) calendar days of a request for a modification.

*Copies of the Indiana Storm Water Quality Manual referenced in this section may be obtained from the Division of Soil Conservation, Indiana Department of Natural Resources, 402 West Washington Street, Room W265, Indianapolis, Indiana 46204-2739.

Water Pollution Control Board; 327 IAC 15-5-6.5)

SECTION 15. 327 IAC 15-5-7, AS READOPTED AT 24 IR 1518, IS AMENDED TO READ AS FOLLOWS:

IAC 15-5-7. General requirements for storm water quality control

Authority: IC 13-14-8; IC 13-15-1-2; IC 13-15-2; IC 13-18-3; IC 13-18-4

Affected: IC 13-12-3-1; IC 13-18-1

Sec. 7. (a) ~~The operator shall develop an erosion control construction storm water pollution prevention plan in accordance with the requirements under this section.~~ **All storm water quality measures, including and erosion and sediment controls necessary to comply with this rule shall must be implemented in accordance with the approved construction plan and meet the design criteria, standards, and specifications as established in the "Indiana Stormwater Quality Manual"* or similar guidance documents approved for use by IDEM and DNR the department (IDEM) and Indiana department of natural resources (DNR) requirements under this section.**

(b) ~~An operator~~ **A project site owner shall, at least, meet or exceed** the following requirements ~~shall be met on all sites: during the period when active land disturbing activities occur:~~

(1) Sediment-laden water which otherwise would flow from the project site shall be ~~detained~~ **treated** by erosion **and sediment** control ~~practices~~ **measures** appropriate to minimize sedimentation. ~~in the receiving stream. No storm water shall be discharged from the site in a manner causing erosion in the receiving channel at the point of discharge.~~

(2) Appropriate measures shall be ~~taken~~ **implemented by the operator** to minimize or eliminate wastes or unused building materials, including, ~~but not limited to,~~ garbage, debris, cleaning wastes, wastewater, **concrete truck washout**, and other substances from being carried from a **project** site by run-off or wind. ~~Proper disposal or management of all wastes and unused building materials, appropriate to the nature of the waste or material, is required.~~ **Identification of areas where concrete truck washout is permissible must be clearly posted at appropriate areas of the site. Wastes and unused building materials shall be managed and disposed of in accordance with all applicable statutes and regulations.**

(3) ~~Sediment being tracked from a site onto public or private roadways shall be minimized. This can be accomplished initially by a temporary gravel construction entrance.~~ **A stable construction site access shall be provided at all points of construction traffic ingress and egress to the project site.**

(4) Public or private roadways shall be kept cleared of ~~free from~~ accumulated sediment **and tracked soil by installing appropriate erosion and sediment control measures that is a result of runoff or tracking.**

Bulk clearing of ~~accumulated~~ sediment shall not include flushing the area with water. Cleared sediment shall be returned to the point of likely origin or other suitable location. **redistributed or disposed of in a manner that is in accordance with all applicable statutes and regulations.**

~~(5) All on-site storm drain inlets shall be protected against sedimentation with straw bales, filter fabric, or equivalent barriers meeting accepted design criteria, standards, and specification for that purpose.~~

~~(6) The following items apply during the time the construction activity is taking place:~~

~~(A) Storm water drainage from adjacent areas that naturally pass through the site shall be controlled by diverting it around disturbed areas. Alternatively, the existing channel must be protected and/or improved to prevent erosion or sedimentation from occurring.~~

~~(B) Run-off from a disturbed area shall be controlled by one (1) or more of the following measures:~~

~~(i) Except as prevented by inclement weather conditions or other circumstances beyond the control of the operator, appropriate vegetative practices will be initiated within seven (7) days of the last land disturbing activity at the site regulated by this rule. Appropriate vegetative practices include, but are not limited to, seeding, sodding, mulching, covering, or by other equivalent erosion control measures.~~

~~(ii) The erosion control plan shall be implemented on disturbed areas within the construction site. The plan shall include erosion control measures as appropriate, such as, but not limited to, the following:~~

~~(AA) Sediment detention basins.~~

~~(BB) Sediment control practices, such as filter strips, diversions, straw bales, filter fences, inlet protection measures, slope minimization, phased construction, maximizing tree coverage, temporary and permanent seeding of vegetation, mulching, and sodding.~~

~~All measures involving erosion control practices shall be designed and installed under the guidance of a qualified professional experienced in erosion control and following the specifications and criteria under this subsection. All other nonengineered erosion control measures involving vegetation should be installed according to accepted specifications and criteria under this subsection.~~

(5) Storm water run-off leaving a project site must be discharged in a manner that ~~does not cause or contribute to erosion or sedimentation or a violation of 327 IAC 2-1-6~~ is consistent with applicable state or federal law.

~~(6) The operator-project site owner shall post a notice near the main entrance of the construction project site. For linear project sites, such as a pipeline or highway, the notice must be placed in a publicly accessible location near the project field office. The notice must be maintained in a legible condition and contain the following information:~~

~~(A) Copy of the completed notice of intent-NOI letter and the NPDES permit number, where applicable.~~

~~(B) Name, company name, telephone number, email address (if available), and address of the project site owner or a local contact person.~~

~~(C) Location of the construction plan if the project site does not have an on-site location to store the plan.~~

~~(D) If the construction project is a linear project, such as a pipeline or highway, the notice must be placed in a publicly accessible location near where the currently active construction is underway.~~

(7) This permit and posting of the notice under subdivision (6) does not provide the public with any right to trespass on a ~~construction~~ project site for any reason, nor does it require that the ~~operator~~ project site owner allow members of the public access to the ~~construction~~ project site.

(8) The storm water pollution prevention plan shall serve as a guideline for storm water quality, but should not be interpreted to be the only basis for implementation of storm water quality measures for ~~this~~ a project site. The ~~operator or the operator's contractor shall implement,~~ project site owner is responsible for implementing, in accordance with this rule, all measures necessary to adequately prevent polluted storm water run-off.

(9) The ~~operator~~ project site owner shall ~~conduct a preconstruction meeting to inform all general contractors and subcontractors, construction management firms, grading or excavating contractors, utility contractors, and the contractors who will be involved in the implementation of the project of the~~ that have primary oversight on individual building lots of the terms and conditions of this ~~general permit that authorizes the discharge of storm water from the site.~~ Before conducting any service at the site all contractors and subcontractors shall understand the rule and the conditions and standards of the storm water pollution prevention plan and the schedule for proposed implementation.

(10) Phasing of construction activities, shall be used, where possible, to minimize disturbance of large areas.

(11) Appropriate measures shall be planned and installed as part of an erosion and sediment control system.

(12) All storm water quality measures must be designed and installed under the guidance of a trained individual.

(13) Collected run-off leaving a project site must be either discharged directly into a well-defined, stable receiving channel, or diffused and released to adjacent property with out causing an erosion or pollutant problem to the adjacent property owner.

(14) Drainage channels and swales must be designed and adequately protected so that their final gradients and resultant velocities will not cause erosion in the receiving channel or at the outlet.

(15) Natural features, including wetlands and sinkholes, shall be protected from pollutants associated with storm water run-off.

~~(16) Surface stablization of all bare or thinly vegetated areas to be left idle for fifteen (15) days or more must be temporarily or permanently stabilized to reduce erosion potential. Appropriate stabliization includes seeding, anchored mulch, or the application of nonerosive cover.~~ Unvegetated or vegetated areas with less than seventy percent (70%) cover that are scheduled or likely to be left inactive for fifteen (15) days or more must be temporarily or permanently stabilized with measures appropriate for the season to reduce erosion potential. Alternative measures to site stabilization may be acceptable if the project site owner or their representative can demonstrate they have implemented erosion and sediment control measures adequate to prevent sediment discharge from the inactive area.

- ~~(17) Generation of fugitive dust and wind-blown soil shall be minimized such that it is not visibly crossing the property line or boundaries of the property, right-of-way, or easement on which the source is located. Every reasonable precaution must be taken to minimize fugitive dust emissions and wind-blown soil in accordance with 326 IAC 6.~~
- ~~(18) During the period of construction activities, all storm water quality measures necessary to meet the requirements of this rule shall be maintained in working order.~~
- (18) A self monitoring program that includes the following must be implemented:
- (A) A trained individual shall perform a written evaluation of the project site:
 - (i) by the end of the next business day following each measurable storm event and;
 - (ii) at a minimum of one (1) time per week.
 - (B) The evaluation must address:
 - (i) the maintenance of existing storm water quality measures to ensure they are functioning properly, and
 - (ii) identify additional measures necessary to remain in compliance with all applicable statutes and regulations.
 - (C) Written evaluation reports must include:
 - (i) the name of the individual performing the evaluation;
 - (ii) the date of the evaluation;
 - (iii) problems identified at the project site; and
 - (iv) details of corrective actions recommended and completed.
 - (D) All evaluation reports for the project site must be made available to the inspecting authority within forty-eight (48) hours of a request.
- ~~(19) A quality assurance program that includes the following must be implemented:~~
- ~~(A) A qualified professional shall perform a written evaluation of the site following each measurable rainfall in a twenty-four (24) hour period and at a minimum of one (1) time per week during periods of no rainfall. The evaluation must address the maintenance of existing storm water quality measures to ensure they are functioning properly, and identify additional measures to ensure they are functioning properly, and identify additional measures necessary to remain in compliance with all applicable statutes and regulations.~~
- ~~(B) Written evaluation reports must include the name of the individual performing the evaluation, date of the evaluation, problems identified at the site, and details of corrective actions recommended and completed.~~
- ~~(C) Maintain a record of all evaluation reports for the site. Reports must be made available to the inspecting authority within forty-eight (48) hours of a request for inspection.~~
- ~~(20)~~(19) Proper storage and handling of materials such as fuels or hazardous wastes, and spill prevention and cleanup measures shall be implemented to minimize the potential for pollutants to contaminate surface or ground water or degrade soil quality.
- ~~(e) During the period of construction activity at a site, all erosion control measures necessary to meet the requirements of this rule shall be maintained by the operator.~~

~~(d) All erosion control measures required to comply with this rule shall meet the design criteria, standards, and specifications for erosion control measures established by the department in guidance documents similar to, or as effective as, those outlined in the Indiana Handbook for Erosion Control in Developing Areas from the division of soil conservation, Indiana department of natural resources and the Field Office Technical Guide from the Soil Conservation Service. The erosion control plan shall include, but is not limited to, the following:~~

~~(1) A map of the site in adequate detail to show the site and adjacent areas, including the following:~~

~~(A) Site boundaries and adjacent lands which accurately portray the site location.~~

~~(B) Lakes, streams, channels, ditches, wetlands, and other water courses on and adjacent to the site.~~

~~(C) One hundred (100) year floodplains, floodway fringes, and floodways.~~

~~(D) Location of the predominant soil types which may be determined by the United States Department of Agriculture, SCS County Soil Survey, or an equivalent publication, or as determined by a certified professional soil scientist.~~

~~(E) Location and delineation of vegetative cover such as grass, weeds, brush, and trees.~~

~~(F) Location and approximate dimensions of storm water drainage systems and natural drainage patterns on, and immediately adjacent to, the site.~~

~~(G) Locations and approximate dimensions of utilities, structures, roads, highways, and paving.~~

~~(H) Site topography, both existing and planned, at a contour interval appropriate to indicate drainage patterns.~~

~~(I) Potential areas where point source discharges of storm water may enter ground water, if any.~~

~~(2) A plan of final site conditions on the same scale as the existing site map showing the site changes.~~

~~(3) A site construction plan shall include, but is not limited to, the following:~~

~~(A) Locations and approximate dimensions of all proposed land disturbing activities.~~

~~(B) Potential locations of soil stockpiles.~~

~~(C) Locations and approximate dimensions of all erosion control measures necessary to meet the requirements of this rule.~~

~~(D) Schedule of the anticipated initiation and completion dates of each land disturbing activity, including the installation of erosion control measures needed to meet the requirements of this rule.~~

~~(E) Provisions, including a schedule, for maintenance of the erosion control measures during construction.~~

~~(F) Where feasible, preserve vegetation that exists on the site prior to the initiation of land disturbing activities.~~

***Copies of the Indiana Storm Water Quality Manual referenced in this section may be obtained from the Division of Soil Conservation, Indiana Department of Natural Resources, 402 West Washington Street, Room W265, Indianapolis, Indiana 46204-2739. (Water Pollution Control Board; 327 IAC 15-5-7; filed Aug 31, 1992, 5:00 p.m.:16 IR 24; readopted filed Jan 10, 2001, 3:23 p.m.:24 IR 1518)**

SECTION 17. 327 IAC 15-5-7.5 IS ADDED TO READ AS FOLLOWS:

327 IAC 15-5-7.5 General requirements for individual building lots within a permitted project

Authority: IC 13-14-8; IC 13-15-1-2; IC 13-15-2; IC 13-18-3; IC 13-18-4

Affected: IC 13-12-3-1; IC 13-12-3-1

Sec.7.5. (a) All storm water quality measures, including erosion and sediment control, necessary to comply with this rule shall be implemented in accordance with the approved plan and meet the design criteria, standards, and specifications as established in the "Indiana Stormwater Quality Manual"* or similar guidance documents approved for use by ~~IDEM and DNR~~ the department.

(b) Provisions for erosion and sediment control on individual building lots regulated under the original permit of ~~an operator~~ a project site owner must include the following requirements:

- (1) The ~~builder~~ individual lot operator, whether owning the property or acting as the agent of the property owner, shall be responsible for erosion and sediment control requirements associated with activities on individual lots.**
- (2) Installation and maintenance of a stable construction entrance.**
- (3) Installation and maintenance of appropriate perimeter erosion and sediment control measures prior to land disturbance.**
- (4) Sediment discharge and tracking from each lot must be minimized throughout ~~construction~~ the land disturbing activities on the lot until permanent stabilization has been achieved.**
- (5) ~~Daily~~ Cleanup of sediment that is either tracked or washed onto roads. Bulk clearing of sediment shall not include flushing the area with water. Cleared sediment must be redistributed or disposed of in a manner that is in compliance with all applicable statutes and regulations.**
- (6) Adjacent lots disturbed by ~~the builder or subcontractors~~ an individual lot operator must be repaired and stabilized with temporary or permanent ~~vegetation~~ surface stabilization.**

***Copies of the Indiana Storm Water Quality Manual referenced in this section may be obtained from the Division of Soil Conservation, Indiana Department of Natural Resources, 402 West Washington Street, Room W265, Indianapolis, Indiana 46204-2739. (Water Pollution Control Board; 327 IAC 15-5-7.5)**

SECTION 16. 327 IAC 15-5-8, AS READOPTED AT 24 IR 1518, IS AMENDED TO READ AS FOLLOWS:

327 IAC 15-5-8 Project termination

Authority: IC 13-14-8; IC 13-15-1-2; IC 13-15-2; IC 13-18-3; IC 13-18-4

Affected: IC 13-12-3-1; IC 13-18-1

Sec. 8. (a) The operator **project site owner** shall plan an orderly and timely termination of the construction ~~or land disturbing activities, which shall include the following:~~

- ~~(1) Allowing the installation of utility lines on the site, whenever practicable, prior to final land grading, seeding, and mulching of the site.~~
- ~~(2) Implementing erosion control measures which are to remain on the site.~~

~~(b) The commissioner may, subsequent to termination of a project, inspect the site to evaluate the adequacy of the remaining erosion control measures.~~ **including the implementation of storm water quality measures which are to remain on the site.**

(b) The ~~operator~~ project site owner shall submit a notice of termination (NOT) to the commissioner and a copy to the appropriate SWCD or other designated entity in accordance with the following:

(1) Except as provided in subdivision (2), the ~~operator~~project site owner shall submit an NOT letter when the following conditions have been met:

- (A) All land disturbing activities, including construction on all building lots, have been completed and the entire site has been stabilized.**
- (B) All temporary erosion and sediment control measures have been removed.**

The NOT letter must contain a verified statement that each of the conditions in this subdivision has been met.

(2) The ~~operator~~project site owner may submit an NOT letter to obtain early release from compliance with this rule if the following conditions are met:

- (A) The remaining, undeveloped acreage does not exceed five (5) acres, with contiguous areas not to exceed one (1) acre.**
- (B) A map of the project site, clearly identifying all remaining undeveloped lots, is attached to the NOT letter. The map must be accompanied by a list of names and addresses of individual lot owners or ~~builders~~ individual lot operators of all undeveloped lots.**
- (C) All public and common improvements, including infrastructure, have been completed and permanently stabilized and have been transferred to the appropriate local entity.**
- (D) The remaining acreage does not pose a significant threat to the integrity of the infrastructure, adjacent properties, or water quality.**
- (E) All permanent storm water quality measures have been implemented and are operational.**

~~(c) Maintenance of the remaining erosion control measures shall be the responsibility of the occupier of the property after the operator has terminated land disturbing activities.~~ **Following acceptance of the NOT letter and written approval from the department for early release under subsection (b), the ~~operator~~ project site owner shall notify all current**

individual lot owners and all subsequent ~~owner or~~ individual lot owners of the remaining undeveloped acreage and acreage ~~under~~ with construction activity that they are responsible for complying with section 97.5 of this rule. The remaining individual lot owners do not need to submit an NOI letter or NOT letter. The notice must contain a verified statement that each of the conditions in subsection(b)(2) have been met. The notice must also inform the individual lot owners of the requirements to:

- (1) install and maintain appropriate measures to prevent sediment from leaving the ~~property under this rule~~ individual building lot; and
- (2) maintain all erosion and sediment control measures that are to remain on-site ~~under this rule~~ as part of the construction plan.

(d) The SWCD, DNR, ~~DSC~~, other entity designated by the department or a regulated MS4, or the department may inspect the project site to evaluate the adequacy of the remaining storm water quality measures and compliance with the NOT letter requirements. If the inspecting entity finds that the ~~operator~~ project site owner has ~~properly~~ sufficiently filed an NOT letter, the entity shall forward the NOT notification to the department. Upon receipt of the verified NOT letter by the department, and receipt of written approval from the department, the ~~developer~~ project site owner shall no longer be responsible for compliance with this rule.

(e) After a verified NOT letter has been submitted for a project site, maintenance of the remaining storm water quality measures shall be the responsibility of the individual lot owner or occupier of the property. (*Water Pollution Control Board; 327 IAC 15-5-12*)

SECTION 18. 327 IAC 15-5-10, AS READOPTED AT 24 IR 1518, IS AMENDED TO READ AS FOLLOWS:

327 IAC 15-5-10 Inspection and enforcement

Authority: IC 13-13-5-2; IC 13-15-1-2; IC 13-15-2-1; IC 13-18-3-1; IC 13-18-3-2; IC 13-18-3-3; IC 13-18-3-13; IC 13-18-4-1; IC 13-18-4-3

Affected: IC 13-14-10; IC 13-15-7; IC 13-18-3; IC 13-18-4; IC 13-30

Sec. 10. (a) The department or its designated representative may inspect any **project** site involved in ~~construction and disturbing~~ activities regulated by this rule at reasonable times. ~~The erosion control plan must be readily accessible for review at the time of the inspection. The department or its designated representatives may make recommendations to the project site owner or their representative to install appropriate measures beyond those specified in the storm water pollution prevention plan to achieve compliance.~~

(b) All persons engaging in ~~construction or other land-disturbing activity~~ activities on a **project** site shall be responsible for complying with the ~~soil erosion control~~ **storm water pollution prevention plan** for that site and the provisions of this rule.

(c) The department shall investigate potential violations of this rule to determine

which person may be responsible for the violation. The department shall, if appropriate, consider public records of ownership, building permits issued by local units of government, and other relevant information, which may include site inspections, ~~soil erosion control~~ **storm water pollution prevention** plans, notices of intent, and other information related to the specific facts and circumstances of the potential violation. Any person causing or contributing to a violation of any provisions of this rule shall be subject to enforcement and penalty under IC 13-14-10, IC 13-15-7, and IC 13-30.

(d) If remaining ~~erosion control~~ **storm water quality** measures are not properly maintained by the person occupying or owning the property, the department may pursue enforcement against that person for correction of deficiencies under 327 IAC 15-1-4.

(e) **Construction plans and supporting documentation associated with the quality assurance plan must be made available to the department or its designated representatives within forty-eight (48) hours of such a request.** (*Water Pollution Control Board; 327 IAC 15-5-10; filed Aug 31, 1992, 5:00 p.m.: 16 IR 26; filed Mar 23, 2000, 4:15 p.m.: 23 IR 1912; readopted filed Jan 10, 2001, 3:23 p.m.: 24 IR 1518*)

SECTION 19. 327 IAC 15-5-12 IS ADDED TO READ AS FOLLOWS:

327 IAC 15-5-12 Duration of coverage

Authority: IC 13-14-8; IC 13-15-1-2; IC 13-15-2; IC 13-18-3; IC 13-18-4

Affected: IC 13-12-3-1; IC 13-18-1

Sec. 12. (a) A permit issued under this rule is granted by the commissioner for a period of five (5) years from the date coverage commences.

(b) Once the five (5) year permit term duration is reached, a general permit issued under this rule will be considered expired, and, as necessary for construction activity continuation, a new NOI letter would need to be submitted in accordance with section 12 of this rule.

(c) To obtain renewal of coverage under this rule, the information required under ~~327 IAC 15-3~~ and sections 5 and 6 of this rule must be submitted to the commissioner ninety (90) days prior to the termination of coverage under this NPDES general permit rule, unless the commissioner determines that a later date is acceptable. Coverage under renewal NOI letters will begin on the date of expiration from the previous five (5) year permit term. (*Water Pollution Control Board; 327 IAC 15-5-12*)

SECTION 21. 327 IAC 15-6-1, AS READOPTED AT 24 IR 1518, IS AMENDED TO READ AS FOLLOWS:

Rule 6. Storm Water Discharges Exposed to Industrial Activity

327 IAC 15-6-1 Purpose

Authority: IC 13-14-8; IC 13-15-1-2; IC 13-15-2; IC 13-18-3; IC 13-18-4
Affected: IC 13-12-3-1; IC13-18-1

Sec. 1. The purpose of this rule is to establish requirements for point source storm water discharges exposed to industrial activity that are composed entirely of storm water and allowable nonstorm water, associated with that are exposed to industrial activity, so that the public health, existing water uses, and aquatic biota are protected. Storm water discharges associated with construction activity are regulated under rule 5 of this article only. ~~Permitting of discharges under this rule is contingent upon payment of applicable fees, submittal of a complete notice of intent (NOI) letter, the timely submittal of required compliance information, and written approval of coverage from the commissioner.~~ (Water Pollution Control Board; 327 IAC 15-6-1; filed Aug 31, 1992, 5:00 p.m.: 16 IR 26; readopted filed Jan 10, 2001, 3:23 p.m.: 24 IR 1518)

SECTION 21. 327 IAC 15-6-1, AS READOPTED AT 24 IR 1518, IS AMENDED TO READ AS FOLLOWS:

SECTION 22. 327 IAC 15-6-2, AS READOPTED AT 24 IR 1518, IS AMENDED TO READ AS FOLLOWS:

327 IAC 15-6-2 Applicability of the general permit rule for storm water discharges exposed to industrial activity

Authority: IC 13-14-8; IC 13-15-1-2; IC 13-15-2; IC 13-18-3; IC 13-18-4
Affected: IC 13-12-3-1; IC 13-18-1

Sec. 2. (a) Except as provided in subsections (c) and (d), the requirements under this rule apply to all persons who: **facilities that meet the following requirements:**

(1) Are not prohibited from regulation under a NPDES general permit rule under 327 IAC 15-2-6.

(2) Meet the NPDES general permit rule applicability requirements under 327 IAC 15-2-3. and

(3) Have not received a conditional no exposure exclusion from storm water permitting under section 12 of this rule.

~~(3)-(4)~~ **(4)** Have a new or existing point source discharge composed entirely of storm water and the following allowable nonstorm water associated with discharges exposed to industrial activity; except for categories, in effect on February 12, 1992, of facilities that have storm water effluent guidelines for at least one (1) of their subcategories. These categories include:

(A) cement manufacturing (40 CFR 411);

(B) feedlots (40 CFR 412);

(C) fertilizer manufacturing (40 CFR 418);

(D) petroleum refining (40 CFR 419);

- ~~(E) phosphate manufacturing (40 CFR 422);~~
- ~~(F) steam electric power generation (40 CFR 423);~~
- ~~(G) coal mining (40 CFR 434);~~
- ~~(H) mineral mining and processing (40 CFR 436);~~
- ~~(I) ore mining and dressing (40 CFR 440); and~~
- ~~(J) asphalt (40 CFR 443).~~

If a facility is classified in one (1) of the subcategories that have storm water effluent guidelines, an individual NPDES storm water permit application must be submitted.

(A) Discharges from fire fighting activities.

- (B) Fire hydrant flushings.**
- (C) Potable water sources including waterline flushings.**
- (D) Irrigation drainage.**
- (E) Landscape watering provided all pesticides, herbicides, and fertilizer have been applied in accordance with manufacturer's instructions.**
- (F) Routine external building washdown which does not use detergents.**
- (G) Pavement washwaters where spills or leaks of toxic or hazardous materials have not occurred, unless all spilled material has been removed, and where detergents are not used.**
- (H) Uncontaminated ground water or spring water.**
- (I) Foundation or footing drains where flows are not contaminated with process materials such as solvents.**
- (J) Uncontaminated air conditioning or compressor condensate.**
- (K) Incidental windblown mist from cooling towers that collects on rooftops or adjacent portions of your facility, but not intentional discharges from the cooling tower (for example, "piped" cooling tower blowdown or drains).**
- (L) Vehicle washwaters where uncontaminated water, without detergents or solvents, is utilized.**
- (M) Run-off from the use of dust suppressants approved for use by other program areas within the department.**

Allowable nonstorm water discharges described under this subdivision may be allowed under this rule provided they have not been identified by the permittee or commissioner as a significant contributor of pollutants to a water of the state. If an allowable nonstorm water discharge is determined to be a significant contributor of pollutants to a water of the state an individual wastewater permit may be required for the discharge.

~~(5) The following categories of facilities are considered to be engaging in industrial activity for purposes of this section~~ Have industrial activities classified by one (1) or more of the following categories:

~~(A) Facilities subject to storm water effluent limitation guidelines, new source performance standards, or toxic pollutant effluent standards under 40 CFR Chapter I, Subchapter N*.~~

(A) is a combination of old (B) and (J)

~~(B)~~ (A) Facilities classified under the following SIC codes:

- (i) 20 (food and kindred products).
- (ii) 21 (tobacco products).
- (iii) 22 (textile mill products).
- (iv) 23 (apparel and other textile products).
- (v) 24 (lumber and wood products, ~~except 2434 wood kitchen cabinets~~).
- (vi) 25 (furniture and fixtures).
- ~~(ii)~~(vii) 26 (paper and allied products, ~~except 265 paperboard containers~~).
- (viii) 27 (printing and ~~boxes and~~ 267 publishing).
- ~~(iii)~~(ix) 28 (chemicals and allied products, ~~except 283 drugs~~).
- ~~(iv)~~(x) 29 (petroleum and coal products).
- ~~(v)~~ 311 (leather tanning and finishing).
- ~~(vi)~~(xi) 30 (rubber and miscellaneous plastic products).
- (xii) 31 (leather and leather products).
- (xiii) 32 (stone, clay, and glass products, ~~except 323 products of purchased glass~~).
- ~~(vi)~~(xiv) 33 (primary metal industries).
- ~~(viii)~~(xv) 3441 (fabricated structural metal).
- ~~(ix)~~ 373 (ship and boat building and repairing).
- ~~(xv)~~ 34 (fabricated metal products).
- (xvi) 35 (industrial machinery and equipment).
- (xvii) 36 (electronic and other electric equipment).
- (xviii) 37 (transportation equipment).
- (xix) 38 (instruments and related products).
- (xx) 39 (miscellaneous manufacturing industries).

~~(C)~~(B) Mining operations classified under the following SIC codes:

- (i) 10 (metal mining).
- ~~(ii) 11 (anthracite mining).~~
- ~~(iii) 12 (coal mining).~~
- ~~(iv)~~(ii) 13 (oil and gas extraction).
- ~~(v)~~(iii) 14 (nonmetallic minerals, except fuels).

~~(D)~~(C) Hazardous waste treatment, storage, or disposal facilities, including those that are operating under interim status or a permit under Subtitle C of the Resource Conservation and Recovery Act (RCRA), (42 U.S.C. 6921).

~~(E)~~(D) Landfills, land application sites, open dumps, and transfer stations that receive, or have received, industrial process wastes, as defined in rules of the solid waste management board at 329 IAC 10-2-95, from any of the types of facilities described under this subdivision, ~~including those that are subject to requirements under Subtitle D of the Resource Conservation and Recovery Act (RCRA), (42 U.S.C. 6941)**~~. This inclusion does not include those facilities

that have undergone landfill closure approved by the department, or are regulated under an individual municipal solid waste landfill permit, that includes requirements for addressing the quality of storm water run-off, issued under 329 IAC 10 or a municipal solid waste transfer station permit, that includes requirements for addressing the quality of storm water run-off, issued under 329 IAC 11.

(E) Facilities involved in the recycling of materials, including metal scrap yards, battery reclaimers, salvage yards, and automobile junkyards, including those classified under the following SIC codes:

(i) 5015 (motor vehicles parts, used).

(ii) 5093 (scrap and waste materials).

~~(G)~~(F) Steam electric power generating facilities. Those facilities identified in this clause that are involved in the processing, handling, or storage of coal and associated byproducts are not subject to this rule and must apply for an individual NPDES storm water permit.

~~(H)~~(G) Transportation facilities classified under the following SIC codes which have vehicle maintenance (including vehicle rehabilitation, mechanical repairs, painting, fueling, and lubrication) or industrial equipment cleaning areas:

(i) 40 (railroad transportation).

(ii) 41 (local and interurban passenger transit).

(iii) 42 (trucking and warehousing, ~~except 4221-25~~).

(iv) 43 (United States Postal Service).

(v) 44 (water transportation).

(vi) 45 (transportation by air).

~~Only those portions of a facility that are either involved in vehicle maintenance (including vehicle rehabilitation, mechanical repairs, painting, fueling, and lubrication), industrial equipment cleaning operations, or which are otherwise identified under this subsection must comply with this rule. Those portions of the facility that~~

Facilities involved in airport de-icing operations and having storm water discharges entering a water of the state are not subject to this rule and must apply for an individual NPDES storm water permit. Transportation facilities identified by SIC code 5171 (petroleum bulk stations and terminals) are not subject to this rule and shall, if facility conditions meet the rule applicability requirements, obtain permit coverage under 327 IAC 15-9.

~~(H)~~(H) Treatment works treating domestic sewage or any other sewage sludge or wastewater treatment device or system, used in the storage, treatment, recycling, and reclamation of municipal or domestic sewage, including land dedicated to the disposal of sewage sludge that are located within the confines of the facility, with a design flow of one million (1,000,000) gallons per day or more, or that are required to have an

approved pretreatment program under 40 CFR 403***. Farmland, domestic gardens, or land used for sludge management where sludge is beneficially reused, and which is not physically located in the confines of the facility or areas that are in compliance with section 405 of the Clean Water Act (33 U.S.C. 1345)**** are not subject to this rule under this clause.

~~(K)(I)~~ Facilities, which are, involved in the ~~wholesale processing, transfer, or storage of agricultural chemicals, including those facilities that are classified as SIC code 5191 (farm supplies).~~ (chemical fertilizers and pesticides), which meet any of the following storage capacity criteria:

- (1) Fluid bulk fertilizer in undivided quantities in excess of:
 - (A) two thousand five hundred (2,500) gallons for one vessel; or
 - (B) seven thousand five hundred (7,500) gallons total for multiple vessels at a facility (3 x 2,500 gallon vessels).
- (2) Dry bulk fertilizer in undivided quantities exceeding twelve (12) tons.
- (3) Liquid pesticide in undivided quantities in excess of four hundred (400) gallons.
- (4) Dry pesticide in undivided quantities excess of one hundred (100) pounds that is in solid form prior to any application or mixing for application and includes formulations, such as dusts, wettable powders, dry flowable powders, and granules.

Only those portions of the facility that are involved in the material handling of agricultural chemicals (chemical fertilizers and pesticides) or which are otherwise identified under this clause are required to comply with this rule.

~~(L)(J)~~ Facilities engaged in selling ~~gasoline, diesel, fuel or lubricating oils to the trucking industry, where the facility has on-site truck vehicle maintenance capabilities and activities, serves as a truck stop. This subdivision includes those facilities or plaza, and are classified as SIC code 5541 (gasoline service stations). A~~ Truck stops and plazas which do not have vehicle maintenance activities, and gasoline dispensing facilities, such as automotive service stations, ~~automotive gasoline filling stations, and marine service stations are not subject to this clause.~~ convenience stores and marinas, are not required to comply with this rule.

(b) When a facility, meeting the applicability requirements of subsection (a), is owned by one person but the regulated industrial activity is conducted by another person, it is the duty of the person conducting the regulated industrial activity to apply for a permit under this rule.

(c) A facility classified in one (1) of the following subcategories of facilities that has storm water effluent guidelines for at least one (1) of its subcategories, in effect on February 12, 1992, shall apply for an individual NPDES storm water permit:

- (1) Cement manufacturing (40 CFR 411).
- (2) Feedlots (40 CFR 412).
- (3) Fertilizer manufacturing (40 CFR 418).
- (4) Petroleum refining (40 CFR 419).
- (5) Phosphate manufacturing (40 CFR 422).
- (6) Steam electric power generation (40 CFR 423).
- (7) Coal mining (40 CFR 434).
- (8) Mineral mining and processing (40 CFR 436).
- (9) Ore mining and dressing (40 CFR 440). ~~and~~
- (10) Asphalt (40 CFR 443).

(d) A facility subject to storm water effluent limitation guidelines, new source performance standards, or toxic pollutant effluent standards under 40 CFR Chapter I, Subchapter N* shall apply for an individual NPDES storm water permit.

*Copies of the Code of Federal Regulations (CFR) 40 CFR Chapter I, Subchapter N referenced in this section may be obtained from the Government Printing Office, Washington D.C. 20402 or the Indiana Department of Environmental Management, Office of Water Quality, Indiana Government Center-North, 100 North Senate Avenue, Indianapolis, Indiana 46204.

**Copies of the Subtitle D of the Resource Conservation and Recovery Act (RCRA), (42 U.S.C. 6941) referenced in this section may be obtained from the Government Printing Office, Washington D.C. 20402 or the Indiana Department of Environmental Management, Office of Water Quality, Indiana Government Center-North, 100 North Senate Avenue, Indianapolis, Indiana 46204.

***Copies of the Code of Federal Regulations (CFR) 40 CFR 403 referenced in this section may be obtained from the Government Printing Office, Washington D.C. 20402 or the Indiana Department of Environmental Management, Office of Water Quality, Indiana Government Center-North, 100 North Senate Avenue, Indianapolis, Indiana 46204.

****Copies of section 405 of the Clean Water Act (33 U.S.C. 1345) referenced in this section may be obtained from the Government Printing Office, Washington D.C. 20402 or the Indiana Department of Environmental Management, Office of Water Quality, Indiana Government Center-North, 100 North Senate Avenue, Indianapolis, Indiana 46204. (*Water Pollution Control Board; 327 IAC 15-6-2; filed Aug 31, 1992, 5:00 p.m.: 16 IR 26; errata, 16 IR 751; readopted filed Jan 10, 2001, 3:23 p.m.: 24 IR 1518*)

SECTION 23. 327 IAC 15-6-4, AS READOPTED AT 24 IR 1518, IS AMENDED TO READ AS FOLLOWS:

327 IAC 15-6-4 Definitions

Authority: IC 13-14-8; IC 13-15-1-2; IC 13-15-2; IC 13-18-3; IC 13-18-4

Affected: IC 13-12-3-1; IC 13-18-1

Sec. 4. In addition to the definitions contained in ~~IC 13-7-1, IC 13-13-1.5, IC 13-11-2,~~ 327 IAC 5, and 327 IAC 15-1-2, the following definitions apply throughout this rule:

(1) **"Airport deicing operations"** means the use of urea, or glycol or other potentially toxic compounds, to remove ice from airplanes or runways. An airport or airport operation, using one hundred (100) tons or more of urea, or one hundred thousand (100,000) gallons or more of glycol compounds, on an annual basis, must obtain an individual NPDES permit. On a case-by-case determination by the commissioner, an individual NPDES permit may be required for facilities that use amounts of deicing compounds less than these minimum annual amounts.

(4)(2) **"Best management practices" or "BMPs"** means any of the following measures to prevent or reduce the pollution of waters of the state:

- (A) Schedules of activities.
- (B) Prohibitions of practice.
- (C) Treatment requirements.
- (D) Operation and maintenance procedures.
- (E) Use of containment facilities.
- (F) Other management practices.

BMPs may be employed, for example, to control plant site run-off, spillage or leaks, sludge or waste disposal, or drainage from raw materials storage, resulting from manufacturing, commercial, mining, or silvicultural-regulated industrial activities.

(2)(4) **"Commissioner"** means refers to the commissioner of the department of environmental management or the designated agent of the commissioner.

(3)(5) **"Concentration"** means the mass of any given material present in a unit volume of liquid. Unless otherwise indicated under this rule, concentration values must be expressed in milligrams per liter.

(4)(6) **"Department"** means refers to the department of environmental management.

(5) ~~"Discharges composed entirely of storm water" means discharges regulated under this rule and composed entirely of storm water; however, the following nonstorm water discharges may be allowed under this rule provided the nonstorm water component of the discharge is in compliance with minimum surface water quality standards established in 327 IAC 2-1-6:~~

- ~~(A) Discharges from fire fighting activities.~~
- ~~(B) Fire hydrant flushings.~~
- ~~(C) Potable water sources including waterline flushings.~~
- ~~(D) Irrigation drainage.~~
- ~~(E) Lawn watering.~~
- ~~(H) Air conditioning condensate.~~
- ~~(I) Springs.~~
- ~~(J) Uncontaminated ground water.~~
- ~~(K) Foundation or footing drains where flows are not contaminated with process materials such as solvents.~~

(6)(7) **"Drainage"** means the flow patterns of storm water run-off.

(7)(8) "Drainage area" means the surface area draining storm water run-off.

(8)(9) "Facility" means ~~an individual, partnership, copartnership, firm, company, corporation, association, joint stock company, trust, estate, municipal corporation, city, school city, town, school town, school district, school corporation, county, consolidated unit of government, political subdivision, state agency, or any other legal entity as specific to an industrial location.~~

a parcel of land or site, together with all buildings, equipment, structures, and other stationary items that are:

(A) located on a single site or on contiguous or adjacent sites; and

(B) owned or operated by:

(i) the same person; or

(ii) any person that controls, is controlled by, or is under common control with the same person.

LTM CC "Injection well" means any hole that is deeper than it is wide and through
LSHRP T which fluids can enter the ground water.
Injection wells are regulated under 40 CFR 145
and 40 CFR 144.
LTM CC "Material handling activity" means the storage, loading and unloading,
LSHRP T transportation, or conveyance of any raw material, intermediate product, finished
product, byproduct, or waste product. The term does not include activities
conducted on facility lands property separate from the facility's industrial activities,
such as office buildings and accompanying parking lots, as long as the drainage
from the excluded areas is not mixed with storm water drained from the included
areas.
LTM CC "Measurable storm event" means a precipitation event which results in a
LSHRP T total measure
(14)(15) "Municipal d precipitation accumulation equal to, or greater than, one-tenth
(0.1) inch of rainfall. separate storm sewer system" or "MS4" means a conveyance or
system of conveyances, including roads with drainage systems, municipal streets,
catch basins, curbs, gutters, ditches, manmade channels, or storm drains that is:
(A) owned or operated by a federal entity or state, city, town, borough,
county, parish, district, association, or other public body (created by or
pursuant to state law) having jurisdiction over storm water, including
special districts under state law such as a sewer district, flood control
district or drainage district, or similar entity, or a designated and approved

management agency under Section 208 of the Clean Water Act (33 U.S.C. 1288)* that discharges into waters of the state;

(B) designed or used for collecting or conveying storm water;

(C) not a combined sewer; and

(D) not part of a publicly owned treatment works (POTW) as defined in 40 CFR 122.2**.

(16)(17) "No exposure" means a condition of a facility that exists when all industrial materials and activities are protected by a storm resistant shelter to prevent exposure to precipitation or run-off.

(17)(18) "Non-structural control measure" means the use of non-physical best management practices to reduce or eliminate mobilization of pollutants by storm water.

~~(18) "Notice of deficiency letter" or "NOD" means a written notification indicating an facility's deficiencies in its NOI letter submittal.~~

(19) "Notice of intent letter" or "NOI" "NOI letter" means a written notification indicating a facility's intention to comply with the terms of this rule in lieu of applying for an individual NPDES permit. An NOI letter includes information required under section 5 of this rule.

~~(20) "Notice of sufficiency letter" or "NOS" means a written notification indicating that a facility has sufficiently provided the required information in their NOI letter submittal.~~

~~(21) "Notice of termination letter" or "NOT"~~ (20) "Notice of termination letter" or "NOT letter" means a written notification indicating that facility has met the conditions to terminate its permit coverage under this rule.

~~(22)(21) "Outfall" means a the point or area of discharge to a receiving water.~~
from a point source.

(22) "Point source" has the meaning set forth in 327 IAC 5-1.5-40.

(23) "Pervious surface" means a ground surface that readily allows storm water to infiltrate or percolate into the soils.

(24) "Qualified storm event" means a discharge resulting from a measurable storm event at least seventy-two (72) hours after the previous measurable storm event. The term does not include discharges of snowmelt.

(25) "Qualified environmental professional" means an individual who:

~~(A) has received a baccalaureate or postgraduate degree in the natural sciences or engineering; and~~

~~(B) is trained and experienced in storm water-quality treatment techniques and related fields; as may be demonstrated by state registration, professional certification, experience, or completion of coursework such that enable the individual is able to make sound, professional judgments regarding storm water control or treatment; and monitoring, pollutant fate and transport, and drainage planning.~~

(26) "Risk assessment" "identification" means a non-statistical assessment to determine the potential for storm water or facility personnel to be exposed to

pollutants, and the facility's subsequent need for additional protection practices and measures.

~~(27) "Secondary containment" means structures, usually dikes or berms, designed to catch spilled material from tanks or other storage containers, and eliminate or reduce the impact of the spill to the environment.~~

containment structure" means a structure or a part of a structure that prevents or impedes a hazardous material that is released accidentally from entering surface water or groundwater.

(28) "SIC code" means the four (4) digit standard industrial classification code applicable to a particular industrial activity in accordance with the Standard Industrial Classification Manual published by the Office of Management and Budget of the Executive Office of the President of the United States.

(29) "Storm water discharge" means the release or flow of storm water ~~from a distinct conveyance or via sheetflow.~~ from a point source, which enters a water of the state.

~~(2) (30) "Storm water discharge associated with exposed to industrial activity" means the discharge from any conveyance which is used for collecting and conveying of storm water discharge and which is directly related to that has been exposed to the manufacturing and processing activities, or raw materials or intermediate products storage areas at an industrial plant. The term does not include discharges from facilities or activities excluded from the NPDES program under 40 CFR Part 122, in effect on~~

~~February 12, 1992.~~ facility. The term does not include activities conducted on facility property separate from the facility's industrial activities, such as office buildings and accompanying parking lots, as long as the drainage from the excluded areas is not mixed with storm water drained from the included areas. For the categories of industries identified in ~~clauses (A) through (I),~~ **section 2(5) of this rule**, the term includes, ~~but is not limited to,~~ **the following:**

- (A) Storm water discharges from industrial plant yards.
- (B) Immediate access roads and rail lines used or traveled by carriers of raw materials, manufactured products, waste material, or byproducts used or created by the facility.
- (C) Material handling sites.
- (D) Refuse sites.
- (E) Sites used for the application or disposal of process wastewaters (as defined ~~at in 40 CFR Part 401~~), ~~in effect on February 12, 1992~~.
- (F) Sites used for the storage and maintenance of material handling equipment.
- (G) Sites used for residual treatment, storage, or disposal.
- (H) Shipping and receiving areas.
- (I) Manufacturing buildings.
- (J) Storage areas (including tank farms) for raw materials, and intermediate and finished products. ~~and~~
- (K) Areas where industrial activity has taken place in the past and significant materials remain and are exposed to storm water. ~~For the categories of industries identified in clause (J), the term includes only storm water discharges from all the areas (except access roads and rail lines) that are listed in the previous sentence where material handling equipment or activities, raw materials, intermediate products, final products, waste materials, byproducts, or industrial machinery are exposed to storm water. For the purposes of this paragraph, material handling activities include the storage, loading and unloading, transportation, or conveyance of any raw material, intermediate product, finished product, byproduct, or waste product. The term excludes areas located on plant lands separate from the plant's industrial activities, such as office buildings and accompanying parking lots as long as the drainage from the excluded areas is not mixed with storm water drained from the above described areas. The following facility types are considered to be involved in industrial activity:~~

~~(A) Facilities subject to storm water effluent limitation guidelines, new source performance standards, or toxic pollutant effluent standards under 40 CFR Subchapter N as referenced in 327 IAC 5-12-3 (except~~

~~facilities with toxic pollutant effluent standards which are exempted under clause (J)).~~

(The following text to has been moved to Applicability section)

~~(B) Facilities classified under the following SIC codes:~~

~~(i) 24 (lumber and wood products, except 2434 wood kitchen cabinets).~~

~~(ii) 26 (paper and allied products, except 265 paperboard containers and boxes and 267).~~

~~(iii) 28 (chemicals and allied products, except 283 drugs).~~

~~(iv) 29 (petroleum and coal products).~~

~~(v) 311 (leather tanning and finishing).~~

~~(vi) 32 (stone, clay, and glass products, except 323 products of purchased glass).~~

~~(vii) 33 (primary metal industries).~~

~~(viii) 3441 (fabricated structural metal).~~

~~(ix) 373 (ship and boat building and repairing).~~

~~(C) Mining operations classified as SIC codes:~~

~~(i) 10 (metal mining);~~

~~(ii) 11 (anthracite mining);~~

~~(iii) 12 (coal mining);~~

~~(iv) 13 (oil and gas extraction); and~~

~~(v) 14 (nonmetallic minerals, except fuels).~~

~~(D) Hazardous waste treatment, storage, or disposal facilities, including those that are operating under interim status or a permit under Subtitle C of RCRA as defined in IC 13-7-2-15.~~

~~(E) Landfills, land application sites, and open dumps that receive, or have received, any industrial wastes (waste that is received from any of the facilities described under this subdivision) including those that are subject to requirements under Subtitle D of RCRA as defined in IC 13-7-2-15.~~

~~(F) Facilities involved in the recycling of materials, including metal scrap yards, battery reclaimers, salvage yards, and automobile junkyards, including, but not limited to, those classified as SIC codes:~~

~~(i) 5015 (motor vehicles parts, used); and~~

~~(ii) 5093 (scrap and waste materials).~~

~~(G) Steam electric power generating facilities, including coal handling sites;~~

~~(H) Transportation facilities classified as SIC codes:~~

- ~~(i) 40 (railroad transportation);~~
- ~~(ii) 41 (local and interurban passenger transit);~~
- ~~(iii) 42 (trucking and warehousing, except 4221-25);~~
- ~~(iv) 43 (United States Postal Service);~~
- ~~(v) 44 (water transportation);~~
- ~~(vi) 45 (transportation by air); and~~
- ~~(vii) 5171 (petroleum bulk stations and terminals);~~

~~which have vehicle maintenance, solvent based industrial equipment cleaning, or airport de-icing areas. Only those portions of the facility that are either involved in vehicle maintenance (including vehicle rehabilitation, mechanical repairs, painting, fueling, and lubrication), solvent based industrial equipment cleaning operations, airport de-icing operations, or which are otherwise identified under this subsection are associated with industrial activity.~~

~~(I) Treatment works treating domestic sewage or any other sewage sludge or wastewater treatment device or system, used in the storage treatment, recycling, and reclamation of municipal or domestic sewage, including land dedicated to the disposal of sewage sludge that are located within the confines of the facility, with a design flow of one (1.0) million gallons per day or more, or that are required to have an approved pretreatment program under 40 CFR 403. Not included is farmland, domestic gardens, or land used for sludge management where sludge is beneficially reused, and which is not physically located in the confines of the facility or areas that are in compliance with the Federal Act.~~

~~(J) Facilities classified under the following SIC codes:~~

- ~~(i) 20 (food and kindred products);~~
- ~~(ii) 21 (tobacco products);~~
- ~~(iii) 22 (textile mill products);~~
- ~~(iv) 23 (apparel and other textile products);~~
- ~~(v) 2434 (wood kitchen cabinets);~~
- ~~(vi) 25 (furniture and fixtures);~~
- ~~(vii) 265 (paperboard containers and boxes);~~
- ~~(viii) 267;~~
- ~~(ix) 27 (printing and publishing);~~
- ~~(x) 283 (drugs);~~
- ~~(xi) 285 (paints, varnishes, lacquers, enamels, and allied products);~~
- ~~(xii) 30 (rubber and miscellaneous plastic products);~~
- ~~(xiii) 31 (leather and leather products, except 311);~~
- ~~(xiv) 323 (products of purchased glass);~~

~~(xv) 34 (fabricated metal products, except 3441).
(xvi) 35 (industrial machinery and equipment).
(xvii) 36 (electronic and other electric equipment).
(xviii) 37 (transportation equipment, except 373).
(xix) 38 (instruments and related products).
(xx) 39 (miscellaneous manufacturing industries).
(xxi) 4221 (farm product warehousing and storage).
(xxii) 4222 (refrigerated warehousing and storage).
(xxiii) 4223.
(xxiv) 4224 (household goods warehousing and storage).
(xxv) 4225 (general warehousing and storage);
which are not otherwise included under clauses (B) through (I) only
need to apply for regulation under this rule when storm water is
potentially exposed to industrial activity.~~

(31) “Storm water pollution prevention plan” or “SWP3” means a written document that addresses storm water run-off pollution prevention for a specific industrial facility.

(32) “Structural control measure” means a physical structure designed to reduce or eliminate the mobilization of pollutants by storm water (for example, detention structures, berming, and vegetated swales).

***Copies of section 208 of the Clean Water Act (33 U.S.C. 1288) referenced in this section may be obtained from the Government Printing Office, Washington D.C. 20402 or the Indiana Department of Environmental Management, Office of Water Quality, Indiana Government Center-North, 100 North Senate Avenue, Indianapolis, Indiana 46204.**

(Water Pollution Control Board; 327 IAC 15-6-4; filed Aug 31, 1992, 5:00 p.m.: 16 IR 27; errata filed Sep 10, 1992, 12:00 p.m.: 16 IR-751; readopted filed Jan 10, 2001, 3:23 p.m.: 24 IR 1518)

SECTION 24. 327 IAC 15-6-5 IS AMENDED TO READ AS FOLLOWS:

327 IAC 15-6-5 Additional NOI letter requirements

Authority: IC13-18-3; IC 13-18-4; IC 13-14-8; IC 13-15-1-2; IC 13-15-2

Affected: IC13-18-1; IC 13-12-3-1

Sec. 5. In addition to the NOI letter requirements under 327 IAC 15-3, the following information must be submitted with the NOI letter under this rule:

(1) Name of responsible corporate officer and/or written authorization for an alternate person, individual or position to act as the duly authorized representative for that person, individual, if appropriate, who will be responsible for all signatory responsibilities for the facility under 327 IAC 15-4-3(g).

(2) Identification of the number and location of each point source discharge of storm water associated with industrial activity and the corresponding industrial activity associated with the drainage area of each point source discharge. Name and contact information of the individual who can provide assistance with information pertaining to the facility's permit.

(4)(3) A brief narrative description of the industrial processes performed at the facility.

(4) Identification of the number and location of each outfall where storm water exposed to industrial activity discharges to a water of the state, including a narrative description of the industrial activity associated with the drainage area of each identified outfall.

(3)(5) Identification of substantially similar point source discharges outfalls of storm water identified in subsection (2) on the site, and, if appropriate, the outfall to be monitored as representative of all such discharge points. Also, explain —

(A) All on-site drainage and discharge conveyances, which may include pipes, ditches, swales, and erosion channels.

(B) Adjacent property drainage and discharge conveyances, if directly associated with run-off from the facility.

(C) All on-site and adjacent property water bodies, including wetlands and springs.

(D) An outline of the drainage area for each storm water outfall.

(E) An outline of the facility property indicating directional flows, via arrows, of surface drainage patterns.

(F) An outline of impervious surfaces, which may include pavement and buildings, including an estimate of the square footage of impervious surfaces and pervious surfaces for each drainage area must be included in a map legend.

(G) On-site injection wells, as applicable.

(H) On-site wells used as potable water sources, as applicable.

(I) All existing structural control measures to reduce pollutants in storm water run-off.

(J) All existing and historical underground or aboveground storage tank locations, as applicable.

(K) All plowed or dumped snow storage locations.

(L) All loading and unloading areas for solid and liquid bulk materials.

~~(M) All existing and historical outdoor storage areas for raw materials, intermediary products, final products, and waste materials.~~

~~(N) All existing or historical outdoor storage areas for fuels and other materials that is containerized, for example, in drums, totes, and processing equipment.~~

~~(O) Outdoor processing areas.~~

~~(P) Dust or particulate generating process areas.~~

~~(Q) Outdoor waste storage or disposal areas.~~

~~(R) Pesticide or herbicide application areas.~~

~~(S) Vehicular access roads.~~

(6) The identification of past and present NPDES permits, if applicable.

~~(7) An area map indicating:~~

~~(A) the topographic relief or similar elevations to determine surface drainage patterns;~~

~~(B) the facility boundaries outlined in a contrasting color;~~

~~(C) all receiving streams; and~~

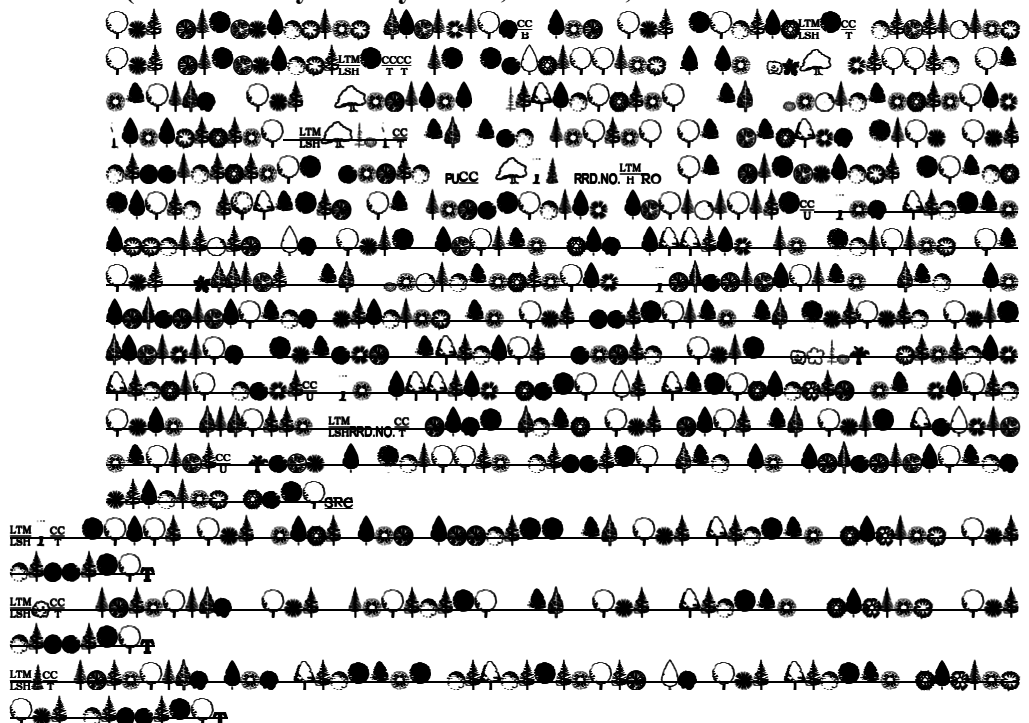

~~(D) all drinking water wells;~~

~~within a one (1) mile radius beyond the property boundaries of the facility. This map must be to scale and include legend and compass coordinates.~~

~~(9)(7) The identification of the regulated MS4 entity receiving the storm water discharge, if applicable.~~

~~(10)(8) Proof of publication of the following statement in the newspaper of largest circulation in the area of the discharge:~~

~~"(Your facility Facility name, address, address of the location~~

(Water Pollution Control Board; 327 IAC 15-6-5; filed Aug 31, 1992, 5:00 p.m.: 16 IR 28; readopted filed Jan 10, 2001, 3:23 p.m.: 24 IR 1518)

SECTION 25. 327 IAC 15-6-6, AS READOPTED AT 24 IR 1518, IS AMENDED TO READ AS FOLLOWS:

327 IAC 15-6-6 Deadline for submittal of an NOI letter; additional information

Authority: IC 13-14-8; IC 13-15-1-2; IC 13-15-2; IC 13-18-3; IC 13-18-4

Affected: IC 13-12-3-1; IC 13-18-1

Sec. 6. All information required under 327 IAC 15-3 and section 5 of this rule shall be submitted to the commissioner in accordance with 327 IAC 15-3-3. ~~except, for persons that operate under 327 IAC 15-5 and that are affected by this rule,~~ **For newly constructed industrial facilities,** the NOI letter shall be submitted **ninety (90)** ~~one hundred eighty (180)~~ days before ~~completion of construction.~~ **prior to start up of industrial operations.** **For existing industrial facilities regulated by this rule,** the NOI letter must be submitted in accordance with 327 IAC 15-2-9. **For existing industrial facilities that have not been regulated by this rule but now meet the applicability requirements of this rule,** the NOI letter must be submitted within ninety (90) days ~~(90) after of the finalization of this rule.~~ **effective date of this rule, unless permission for a later date has been granted by the commissioner.** (Water Pollution Control Board; 327 IAC 15-6-6; filed Aug 31, 1992, 5:00 p.m.: 16 IR 28; readopted filed Jan 10, 2001, 3:23 p.m.: 24 IR 1518)

SECTION 26. 327 IAC 15-6-7, AS READOPTED AT 24 IR 1518, IS AMENDED TO READ AS FOLLOWS:

327 IAC 15-6-7 General requirements for a storm water pollution prevention plan (SWP3)

Authority: IC 13-14-8; IC 13-15-1-2; IC 13-15-2; IC 13-18-3; IC 13-18-4

Affected: IC 13-12-3-1; IC 13-18-1

Sec. 7. (a) The person **having financial responsibility or operational control for a facility** regulated under this rule shall develop, ~~a storm water pollution prevention plan which:~~ **implement, update, and maintain a SWP3 that:**

(1) identifies potential sources of pollution which may reasonably be expected to affect the quality of storm water discharges ~~associated with~~ **exposed to** industrial activity from the facility;

(2) describes practices **and measures** to be used in reducing the potential for pollutants to be exposed to storm water; and

(3) assures compliance with the terms and conditions of this rule;

(4) lists individual, by position title, the member or members of a facility storm water pollution prevention team, who will be responsible for developing the storm water pollution prevention plan and assisting the facility or plant manager in its implementation, maintenance, and revision; and

(5) clearly identifies the responsibilities of each storm water pollution prevention team member.

(b) ~~For each area of the plant that generates storm water discharges associated with industrial activity with a reasonable potential for containing significant amounts of pollutants, a~~ **The SWP3 must include a map and describedescription of all areas of the facility that generate storm water discharges exposed to industrial activity and have a reasonable potential for storm water to be exposed to pollutants. As a minimum, the plan shall contain the following:**

(1) ~~A description of potential pollutant sources as follows:~~ **copy of the complete NOI letter and associated maps.**

(A) ~~The plan must provide a description of areas on the site reasonably expected to be sources which add significant amounts of pollutants to storm water discharges such as areas used for the following:~~

~~(i) Loading or unloading of dry bulk materials or liquids.~~

~~(ii) Outdoor storage of raw materials, intermediary products, or final products, or waste products.~~

~~(iii) Outdoor process activities.~~

~~(iv) Dust or particulate generating processes.~~

~~(v) Unauthorized connections or management practices.~~

~~(vi) Waste disposal practices.~~

~~(vii) Areas upon which pesticides are applied.~~

~~(B) To provide such a description, the plan shall include, at a minimum, the following items:~~

~~(i) A site map indicating, at a minimum, the following:~~

~~(AA) Each drainage and discharge conveyance and outline of the drainage area of each storm water outfall.~~

~~(BB) Paved areas and buildings within the drainage area of each discharge point.~~

~~(CC) Each past or present area used for outdoor storage or disposal of significant materials.~~

~~(DD) Each existing structural control measure to reduce pollutants in storm water run-off.~~

~~(EE) Materials loading and access areas.~~

~~(FF) Each hazardous waste treatment, storage, or disposal facility, including each area not required to have a RCRA permit which is used for accumulating hazardous waste as defined in 327 IAC 5-1-2 under 40 CFR 262.34 as adopted in 329 IAC 3-14-3 [329 IAC 3 was repealed filed Jan 24, 1992, 2:00 p.m.: 15 IR 1002.].~~

~~(GG) Each well where fluids from the facility are the following items:~~

~~(i) A site map indicating, at a minimum, the following:~~

~~(AA) Each drainage and discharge conveyance and outline of the drainage area of each storm water outfall.~~

~~(BB) Paved areas and buildings within the drainage area of each discharge point.~~

~~(CC) Each past or present area used for outdoor storage or disposal of significant materials.~~

~~(DD) Each existing structural control measure to reduce pollutants in storm water run-off.~~

~~(EE) Materials loading and access areas.~~

~~(FF) Each hazardous waste treatment, storage, or disposal facility, including each area not required to have a RCRA permit which is used for accumulating hazardous waste as defined in 327 IAC 5-1-2 under 40 CFR 262.34 as adopted in 329 IAC 3-14-3 [329 IAC 3 was repealed filed Jan 24, 1992, 2:00 p.m.: 15 IR 1002.].~~

~~(GG) Each well where fluids from the facility are injected underground.~~

~~(HH) Springs and wetlands.~~

~~(II) Other surface water bodies.~~

~~(JJ) Soil types.~~

~~(KK) Existing and proposed underground storage tanks.~~

~~(LL) Snow dumping sites, if any.~~

~~(ii) An estimate of the area of impervious surfaces, including paved areas and building roofs, relative to the total area drained by each outfall.~~

~~(iii) A topographic map, or other if a topographic map is unavailable, extending one-fourth (1/4) of a mile beyond the property boundaries of the facility, depicting the facility and each of its intake and discharge structures, springs, other surface water bodies, and drinking water wells listed in public~~

records or otherwise known to the applicant in the map area. This item may be included in the site map required under item (i).

(iv) A narrative description of the following:

(AA) ~~Significant materials that in the three (3) years prior to the submittal of the NOI letter have been treated, stored, or disposed on-site in a manner to allow exposure to storm water.~~

(BB) ~~Method of treatment, storage, or disposal.~~

(CC) ~~Past and present materials management practices employed to minimize contact of these materials with storm water run-off.~~

(DD) ~~Materials loading and access areas.~~

(EE) ~~The location and description of existing structural and nonstructural control measures to reduce pollutants in storm water run-off.~~

(FF) ~~A description of any treatment the storm water receives, including the ultimate disposal of any solid or fluid wastes other than by discharge.~~

(v) ~~A list of significant spills and leaks of toxic pollutants or hazardous substances as defined in 327 IAC 5-1-2 that occurred at the facility within three (3) years prior to the submittal of the NOI letter. Such list shall be updated within ninety (90) days from when a significant spill or leak of toxic pollutants or hazardous substances occurs and shall include a description of the materials released, an estimate of the volume of the release, the location of the release, and a description of any remediation or cleanup measures taken.~~

(vi) ~~For each area of the plant that generates storm water discharges associated with industrial activity with a reasonable potential for containing significant amounts of pollutants, a prediction of the direction of flow, and an estimate of the types of pollutants which could be present in storm water discharges associated with industrial activity.~~

(vii) ~~A summary of existing sampling data describing pollutants in storm water discharges.~~

(2) ~~The facility shall be operated and maintained in such a manner that exposure of storm water to potential sources of significant pollutant material is minimized. To accomplish such an operation and maintenance program, the person shall develop management controls of storm water discharge/run-off appropriate for the facility and implement such controls. The storm water management controls shall include, at a minimum, the following components:~~

(A) ~~A risk identification/assessment and material inventory which evaluates the potential for various areas of the plant to contribute pollutants to the storm water discharge by exposing the storm water to industrial activity. Such assessment and inventory shall consider factors such as the following:~~

- ~~(i) An inventory of the types of materials handled, the location of material handling activities, and types of material management activities.~~
- ~~(ii) Identification of the toxicity of chemicals utilized at the facility as well as the quantity of such chemicals used, produced, or discharged.~~
- ~~(iii) A history of significant leaks or spills of pollutants known to have occurred.~~
- ~~(B) A preventative maintenance program which includes: routine inspection and maintenance of storm water management devices.~~
- ~~(C) A spill prevention and response program which identifies areas where potential spills can occur and their accompanying drainage points, and that minimizes the potential for spills to occur. The program shall include, at a minimum, procedures for the following:~~
 - ~~(i) Proper spill response and clean-up.~~
 - ~~(ii) Reporting a spill to the appropriate facility personnel and, if appropriate, local/state emergency response personnel.~~
 - ~~(iii) Routine maintenance and inspection of spill response/cleanup materials and equipment.~~
- ~~(D) An exposure reduction assessment which identifies the potential to eliminate/reduce storm water exposure in areas identified above as having a risk of exposing the storm water to significant pollutants and appropriate procedures to accomplish such elimination/reduction.~~
- ~~(E) A schedule for implementing procedures as identified under clause (D).~~
- ~~(F) Certify that storm water discharges from the site have been evaluated for the presence of nonstorm water.~~
- (2) A soils map indicating the types of soils found on the facility property, and showing the boundaries of the facility property outlined in a contrasting color. If a facility's property only has impervious surfaces, the soils map requirement can be omitted.**
- (3) ~~An aerial photograph depicting the current layout on the facility property.~~ A graphical representation, such as an aerial photograph, or site layout map(s).**
- (4) ~~A graphical representation, such as an aerial photograph, or site layout map(s) drawn to an appropriate scale,~~ which contains a legend and compass coordinates, indicating, at a minimum, the following:**
 - (A) All on-site storm water drainage and discharge conveyances, which may include pipes, ditches, swales, and erosion channels, related to a storm water discharge.**
 - (B) Known adjacent property drainage and discharge conveyances, if directly associated with run-off from the facility.**
 - (C) All on-site and known adjacent property water bodies, including wetlands and springs.**
 - (D) An outline of the drainage area for each storm water outfall.**
 - (E) An outline of the facility property indicating directional flows, via arrows, of surface drainage patterns.**
 - (F) An outline of impervious surfaces, which includes pavement and buildings,**

and an estimate of the impervious and pervious surface square footage for each drainage area placed in a map legend.

(G) On-site injection wells, as applicable.

(H) On-site wells used as potable water sources, as applicable.

(I) All existing structural control measures to reduce pollutants in storm water run-off.

(J) All existing and historical underground or aboveground storage tank locations, as applicable.

(K) All permanently designated plowed or dumped snow storage locations.

(L) All loading and unloading areas for solid and liquid bulk materials.

(M) All existing and historical outdoor storage areas for raw materials, intermediary products, final products, and waste materials.

(N) All existing or historical outdoor storage areas for fuels, processing equipment, and other containerized materials, for example, in drums and totes.

(O) Outdoor processing areas.

(P) Dust or particulate generating process areas.

(Q) Outdoor waste storage or disposal areas.

(R) Pesticide or herbicide application areas.

(S) Vehicular access roads.

The on-site mapping of items listed in clauses (J) through (S) is required only in those areas that generate storm water discharges exposed to industrial activity and have a reasonable potential for storm water exposure to pollutants. The mapping of historical locations is only required if the historical locations have a reasonable potential for storm water exposure to historical pollutants.

(4) An area map that indicates:

(A) the topographic relief or similar elevations to determine surface drainage patterns;

(B) the facility boundaries outlined in a contrasting color;

(C) all receiving waters; and

(D) all known drinking water wells;

and includes, at a minimum, the features in clauses (A), (C), and (D) within a one quarter (1/4) mile radius beyond the property boundaries of the facility. This map must be to scale and include legend and compass coordinates.

~~(4)~~(5) A narrative description of ~~potential-pollutant source~~ areas, that generate storm water discharges exposed to industrial activity and have a reasonable potential for storm water exposure to pollutants including descriptions for any existing or historical areas listed in section 5(6)(J) through 5(6)(S) of this rule, and any other areas thought to generate storm water discharges exposed to industrial activity and be a reasonable potential source of storm water exposure to pollutants.

The descriptions for each area must include the following:

(A) Type and typical quantity of materials present in the area.

(B) Methods of storage, including presence of any secondary containment measures.

(C) Any remedial actions undertaken in the area, ~~including the following:~~

- ~~(i) The date and type of each action, for example, removal of an underground storage tank.~~
- ~~(ii) The quantity and type of contaminated materials, such as soils or water, removed or treated.~~
- ~~(iii) The results of any analytical sampling data to confirm an adequate removal of contaminated media.~~
- ~~(iv) The name and address of any disposal facility utilized.~~

to eliminate pollutant sources or exposure of storm water to those sources. If a corrective action plan was developed, the type of remedial action and plan date shall be referenced.

(D) Any ~~spill or leak history in the area, for materials spilled in excess of their reportable quantity or twenty-five (25) gallons, whichever is lesser,~~ significant release or spill history dating back a period of three (3) years from the date of the initial NOI letter, in the identified area, for materials spilled outside of secondary containment structures and impervious surfaces in excess of their reportable quantity, including the following:

- (i) The date and type of material released or spilled.**
- (ii) The estimated volume released or spilled.**
- (iii) A description of the remedial actions undertaken, including disposal or treatment.**
- ~~(iv) The results of any analytical sampling data to confirm an adequate removal of contaminated media.~~

Depending on the adequacy or completeness of the remedial actions undertaken, the spill history shall be used to determine additional pollutant sources that may be exposed to storm water. In subsequent permit terms, the history shall date back for a period of five (5) years from the date of the NOI letter.

(E) ~~The descriptions for each area must include a risk assessment analysis.~~ Where chemicals or materials have the potential to be exposed to storm water discharges, the descriptions for each identified area must include a risk identification analysis of chemicals or materials stored or used within the area. The analysis must include the following:

- (i) Toxicity data of chemicals or materials used within the area, referencing appropriate Material Safety Data Sheet information locations.**
- (ii) The frequency and typical quantity of listed chemicals or materials, to be stored on site.**
- (iii) Potential ways in which storm water discharges may be exposed to listed chemicals and materials.**

- (iv) The likelihood of the listed chemicals and materials to come into contact with storm water or facility personnel.
- ~~(5)~~(6) A narrative description of existing and planned management practices and measures to improve the quality of storm water run-off ~~leaving~~ entering a water of the ~~facility property~~ state. Descriptions must be created for existing or historical areas listed in section 5(6)(J) through 5(6)(S) and any other areas thought to generate storm water discharges exposed to industrial activity and be a potential source of storm water exposure to pollutants. The description must include the following:
- (A) Any existing or planned structural and nonstructural control practices and measures.
 - (B) Any treatment the storm water receives prior to leaving the facility property or entering a water of the state.
 - (C) The ultimate disposal of any solid or fluid wastes collected in structural control measures other than by discharge.
- (7) If applicable, the specific control practices and measures for potential pollutant source areas must include the following:
- (A) Identification of areas that, due to topography, activities, or other factors, have a high potential for significant soil erosion, and identify and implement measures to limit erosion.
 - (B) A plan to cover, or otherwise reduce the potential for pollutants in storm water discharge from, deicing salt and sand or other commercial or industrial material storage piles, except for exposure resulting from the addition or removal of materials from the pile. For piles that do not have the potential for polluting storm water run-off, the plan needs to provide the basis for determining no exposure potential. The plan must be included in the SWP3.
 - (C) Storage piles of sand and salt or other commercial or industrial materials must be stored in a manner to reduce the potential for polluted storm water run-off and in accordance with the plan required under subdivision (6)(B).
- ~~(6)~~(8) Information or other documentation required under subsection (d).
- ~~(7)~~(9) The results of monitoring required in section 7.3 of this rule. The monitoring data must include completed field data sheets, chain-of-custody forms, and laboratory results. If the monitoring data is not placed into the facility's SWP3, the on-site location for storage of the information must be referenced in the SWP3. As two (2), or more, sample monitoring events are completed, the laboratory results must be ~~placed in a comparative table, so that each sampled parameter can be compared to indicate water quality improvements in the run-off from the facility.~~
- ~~(8)~~ If ~~parameter reductions are not indicated~~ the parameters and sample type are identical, historical storm water monitoring data at each discharge outfall identified in section 5(2) of the rule, or representative discharge outfall identified in section 5(5) of this rule, can be used in the ~~comparative table compiled under subdivision (7), the source of the pollutant parameter must be investigated, and either~~

eliminated or reduced via a management practice or measure comparison to provide data that is more reflective of initial water quality conditions.

(10) ~~1. The permittee shall develop and implement a management practice or measure comparison to provide data that is more reflective of initial water quality conditions.~~

~~2. The permittee shall develop and implement a management practice or measure comparison to provide data that is more reflective of initial water quality conditions.~~

~~3. The permittee shall develop and implement a management practice or measure comparison to provide data that is more reflective of initial water quality conditions.~~

~~4. The permittee shall develop and implement a management practice or measure comparison to provide data that is more reflective of initial water quality conditions.~~

~~5. The permittee shall develop and implement a management practice or measure comparison to provide data that is more reflective of initial water quality conditions.~~

~~6. The permittee shall develop and implement a management practice or measure comparison to provide data that is more reflective of initial water quality conditions.~~

~~7. The permittee shall develop and implement a management practice or measure comparison to provide data that is more reflective of initial water quality conditions.~~

(D) At a minimum, quarterly inspections of the storm water management measures and storm water run-off conveyances. Inspections must be documented and either contained in, or have the on-site record keeping location referenced in, the SWP3.

(E) An employee training program to inform personnel at all levels of responsibility that have the potential to engage in industrial activities that impact storm water quality of the components and goals of the SWP3. Training must occur at a minimum annually and should address topics such as spill response, good housekeeping and material management practices. All employee training sessions, including relevant storm water topics discussed and a roster of attendees, must be documented and either contained in, or have the on-site record keeping location referenced in, the SWP3.

- (2) A written spill response program, including the following:
- (A) Location, description, and quantity of all response materials and equipment.
 - (B) Response procedures for facility personnel to respond to a release.
 - (C) Contact information for reporting spills, both for facility staff and external emergency response entities.
- (3) A written nonstorm water assessment, including the following:
- (A) A certification letter stating that storm water discharges entering a water of the state have been evaluated for the presence of illicit discharges and non-storm water contributions.
 - (B) Detergent or solvent-based washing of equipment or vehicles that would allow washwaters additives to enter any storm drainage system or receiving water shall not be allowed at the facility.
 - (C) All interior maintenance area floor drains with the potential for maintenance fluids or other materials to enter storm sewers must be either sealed, connected to a sanitary sewer with prior authorization, or appropriately permitted under the NPDES wastewater program pursuant to 327 IAC 5. The sealing, sanitary sewer connecting, or permitting of drains under this item must be documented in the written nonstorm water assessment program.
 - (D) The certification shall include a description of the method used, the date of any testing, and the on-site drainage points that were directly observed during the test.
- (4) If parameter reductions are not indicated in the comparison conducted under subsection(b)(9) and they cannot be attributed to laboratory error or significant variability in the rainfall events, the source of the pollutant parameter must be investigated, and either eliminated or reduced via a management practice or measure to the extent technologically practicable and cost beneficial. A lack of reduction does not, in and of itself, constitute a violation of this permit. However, insufficient reductions may be used to identify facilities that would be more appropriately covered under an individual storm water NPDES permit. If parameter concentrations are at, or below, laboratory detection limitations, further reductions are not necessary.

~~(e)(d)~~ The SWP3 must meet the following general requirements of a storm water pollution prevention plan shall include the following:

- (1) The plan shall be certified by a qualified professional.
- (2) The plan shall be retained on-site at the facility and be available for review by a representative of the commissioner for any discharge shall also monitor the storm water grab sample for any additional parameters listed in that permit.
- (4) During the first year of regulation and prior to implementation of the SWP3, a facility upon request, or in the case of a storm water discharge exposed to industrial activity which discharges through a regulated municipal separate

storm sewer system conveyance, by the operator or operators of the regulated municipal system.

(3) ~~A schedule shall be included with the plan which allows for compliance with the terms of~~ The plan **must be completed and implemented** on or before three hundred sixty-five (365) days after submission of ~~the~~ **a timely-submitted initial NOI letter, or the expiration date of the previous five (5) year permit term;** in the case of new facilities, prior to initiation of operation at the facility. The commissioner may grant an extension of this time frame based on a request by the person **having financial responsibility or operational control for a facility** showing reasonable cause.

(4) ~~The person regulated under this rule shall report once per quarter its progress in developing and implementing the plan. Once the plan is completed and implemented, the reports may cease. The reports shall be sent to:~~

~~Indiana Department of Environmental Management~~

~~Permits Section~~

~~Office of Water Management~~

~~105 South Meridian Street~~

~~P.O. Box 6015~~

~~Indianapolis, Indiana 46206-6015.~~

The person having financial responsibility or operational control for a facility shall complete and submit to the commissioner a storm water pollution prevention plan certification checklist form within thirty (30) days of the plan completion date, but no later than three hundred sixty-five (365) days after the submission of a timely-submitted initial NOI letter, or the expiration date of the previous five (5) year permit term. This checklist must also be signed by a qualified professional.

(5) ~~The person~~ A permittee regulated under this rule shall amend the plan by either of the following:

(A) Whenever there is a change in design, construction, operation, or maintenance at the facility, which may have a significant effect on the potential for the discharge of pollutants to surface waters of the state;

(B) Upon written notice by the commissioner that the ~~storm water pollution prevention plan SWP3~~ proves to be ineffective in achieving the general objectives of controlling pollutants in storm water discharges exposed to associated with industrial activity. **Within sixty (60) days of such notification from the commissioner, the permittee shall make the required changes to the SWP3 and shall submit the amended plan to the commissioner for review.**

(6) If a ~~facility~~ permittee has other written plans, required under applicable federal or state law, such as operation and maintenance, spill prevention control and countermeasures, or risk contingency plans, which fulfill certain requirements of a SWP3, these plans may be referenced, at the ~~facility's~~

permittee's discretion, in the appropriate sections of the SWP3 to meet those section requirements.

(7) A permittee may combine the requirements of the SWP3 with another written plan if:

(A) the plan is retained at the facility, and available for review;

(B) all the requirements of the SWP3 are contained within the plan; and

(C) a separate, labeled section is utilized in the plan for the SWP3 requirements.

(Text from (d) moved to new section - 15-6-7.3)

~~(d) Monitoring and reporting requirements shall be as follows:~~

~~(1) Each discharge outfall, or representative discharge outfall, composed entirely of storm water run-off, shall be monitored annually as follows:~~

Parameter	Units Sample Type
Oil and grease	mg/l grab
CBOD ₅	mg/l grab and composite
COD	mg/l grab and composite
TSS	mg/l grab and composite
TKN	mg/l grab and composite
T-phosphorous	mg/l grab and composite
pH	s.u. grab
Nitrate plus nitrite nitrogen	mg/l grab and composite

~~(2) For those facilities subject to Federal Categorical Effluent Guidelines (40 CFR Subchapter N, in effect on February 12, 1992); Sara Title III facilities subject to report releases into the environment of chemicals which are classified as section 313 water priority chemicals used at the plant in the previous reporting year and which are reasonably expected to be in the discharge; or an individual NPDES permit for process discharge, those parameters required under these programs which are not listed in this subsection shall also be monitored and sampled by grab and composite, except cyanide, hexavalent chromium and volatile organic compounds, which shall be sampled by the grab sample method.~~

~~(3) Prior to implementation of the storm water pollution prevention plan, the person regulated under this rule shall sample and analyze the discharge from the outfall(s) regulated by this rule. During the second year of regulation under this rule, after implementation of the storm water pollution prevention plan, the person shall sample and analyze the discharge from the outfall(s) regulated under this rule for two (2) precipitation events. No further physical sampling is required unless the facility is notified to perform additional physical sampling by Indiana department of environmental management. During the third through the fifth year of regulation under this rule, visual inspections of each outfall or representative outfall as identified in the NOI letter shall be performed for two (2) storm events each year~~

with results recorded and reported annually to the permits section. Visual inspections shall report the presence of turbidity, color, foam, solids, floatables, and an oil sheen.

~~(4) A grab sample shall consist of at least one hundred (100) milliliters collected during the first thirty (30) minutes, or as soon thereafter as practicable, of the discharge. The grab sample shall be analyzed separately from the composite sample. A composite sample shall consist of a flow or time-weighted sample, either by the time interval between each aliquot or by the volume of aliquot proportionate to the discharge flow at the time of sampling or the total discharge flow since collection of the previous aliquot. A composite sample shall be taken during a minimum of the first three (3) hours of a storm event.~~

~~(5) There shall be a minimum of three (3) months between reported sampling events.~~

~~(6) Samples taken in compliance with the monitoring requirements under subdivision (4) shall be taken at a point representative of the discharge but prior to entry into surface waters of the state of Indiana or a municipal separate storm sewer.~~

~~(7) Sampling type for discharges from a retention basin with a minimum twenty-four (24) hour detention capacity, or, for coal mines, ten (10) hour detention, shall be a grab sample for all parameters. Such a grab shall be taken within the first thirty (30) minutes of discharge from the pond after initiation of a storm event.~~

~~(8) All samples shall be collected from a discharge resulting from a measurable storm event at least seventy-two (72) hours from the previous measurable storm event and, where feasible, where the duration and total precipitation does not exceed fifty percent (50%) from the average or median precipitation event in the area, as determined by the nearest United States National Weather Service Information Center. Documentation of weather conditions that prevent sampling as described in this subsection must be provided to the commissioner.~~

~~(9) The analytical and sampling methods used shall conform to the current version of 40 CFR 136 as referenced in 327 IAC 5-2-13(c)(1).~~

~~(10) Samples and measurements taken as required under this subsection shall be representative of the volume and nature of the monitored discharge.~~

~~(e) Analysis shall be performed in accordance with 40 CFR 136, in effect on February 12, 1992, for quality assurance and quality control.~~

~~(f) Reporting requirements shall be as follows:~~

~~(1) All samples shall be reported as a value of concentration. Concentration is defined as the mass of any given material present in a unit volume of liquid. Unless otherwise indicated under this rule, concentration values shall be expressed in milligrams per liter.~~

~~(2) For each measurement or sample taken pursuant to the requirements of this rule, the facility shall record the following information:~~

~~(A) The exact place, date, and time of sampling.~~

~~(B) The person who performed the sampling or measurements.~~

~~(C) The dates the analyses were performed.~~

~~(D) The person who performed the analyses.~~

~~(E) The analytical techniques or methods used.~~

~~(F) The results of all required analyses and measurements.~~

~~(3) All records and information resulting from the monitoring activities required under this rule, including all records of analyses performed and calibration and maintenance of instrumentation and recording from continuous monitoring instrumentation, shall be retained~~

~~for a minimum of three (3) years. In cases where the original records are kept at another location, a copy of all such records shall be kept at the facility. The three (3) year period shall be extended:~~

~~(A) automatically during the course of any unresolved litigation regarding the discharge of pollutants by the facility or regarding promulgated effluent guidelines applicable to the facility; or~~

~~(B) as requested by the regional administrator or the Indiana department of environmental management.~~

~~(4) The person regulated under this rule shall submit an annual report to the Indiana department of environmental management containing results obtained during the previous year and shall be postmarked no later than the twenty eighth day of January each year. The regional administrator may request the person to submit monitoring reports to the EPA if it is deemed necessary to assure compliance with the applicable general permit rule.~~

~~(5) Persons regulated under this rule who have a discharge regulated under this rule which enters a municipal separate storm sewer shall also submit a copy of the discharge monitoring report required under subsection (d) to the operator of the municipal system in accordance with the requirements under subsection (d).~~

~~(6) If the person regulated under this rule monitors any pollutant at the location designated in this section more frequently than required under this rule, using approved analytical methods as specified in this subsection, the results of such monitoring shall be reported as additional information in the annual report. Such increased frequency shall also be indicated in the report. (Water Pollution Control Board; 327 IAC 15-6-7; filed Aug 31, 1992, 5:00 p.m.: 16 IR 28; errata filed Sep 10, 1992, 12:00 p.m.: 16 IR 65; errata, 16 IR 898; readopted filed Jan 10, 2001, 3:23 p.m.: 24 IR 1518)~~

SECTION 27. 327 IAC 15-6-7.3 IS ADDED TO READ AS FOLLOWS:

327 IAC 15-6-7.3 Monitoring Requirements

(Monitoring and Reporting Requirements Text moved from 15-6-7(d) with some revisions/additions)

Authority: ~~—~~ IC 13-14-8; IC 13-15-1-2; IC 13-15-2; IC 13-18-3; IC 13-18-4

Affected: ~~—~~ IC 13-12-3-1; IC 13-18-1

Sec. 7.3. (a) Monitoring requirements shall be as follows:

(1) Each discharge outfall identified in section 5(2), or representative discharge outfall identified in section 5(5) , composed entirely of storm water and allowable nonstorm water run-off, shall be monitored as follows:

<u>Parameter</u>	<u>Units</u>	<u>Sample Type</u>	<u>Frequency</u>
------------------	--------------	--------------------	------------------

Oil and grease	mg/l	grab	Annual
CBOD ₅ (Carbonaceous biochemical oxygen demand)	mg/l	grab	Annual
COD (Chemical oxygen demand)	mg/l	grab	Annual
TSS (Total suspended solids)	mg/l	grab	Annual
TKN (Total Kjeldahl nitrogen)	mg/l	grab	Annual
Total phosphorous	mg/l	grab	Annual
pH	s.u.	grab	Annual
Nitrate plus nitrite nitrogen	mg/l	grab	Annual

(2) Each discharge outfall subject to subdivision (1) shall be monitored for any pollutant attributable to a facility's industrial activity which is reasonably expected to be present in the discharge, as well as for any other pollutant that has the potential to be present in a storm water discharge as requested by the commissioner.

~~(3) Facilities that have other pollutants listed by, or required to be monitored under, a NPDES discharge permit issued by the commissioner for any discharge shall also monitor the storm water grab sample for any additional parameters listed in that permit. This additional parameter requirement does not include whole effluent toxicity testing, or other parameters required by another NPDES permit which are determined to be in concentrations below laboratory detection limitations. If loading data is collected, the comparative table referenced in section 7(b)(8) may be modified to reflect the change from concentration data to loading data.~~

~~(4)~~ Within one (1) year of the original or renewal NOI letter submittal and prior to implementation of the SWP3, a permittee regulated under this rule shall sample and analyze the discharge from the outfall identified in the approved NOI letter.

The monitoring data taken from this first year event shall be used by the permittee as an aid in developing and implementing the SWP3. Subsequent annual sampling data shall be used to verify the effectiveness of the SWP3 and will aid the permittee with revising the SWP3 and implementation of additional BMPs, as necessary.

~~(5)~~(4) The commissioner may require a permittee to sample additional storm events beyond the required five (5) annual events upon finding reasonable cause. The commissioner shall notify the facility in writing that additional sampling is required.

~~(6)~~(5) A grab sample must be collected during the first thirty (30) minutes of discharge at the storm water outfalls identified in the NOI letter, or as soon thereafter as practicable.

~~(7)~~ (6) The pH measurement must be taken at the time the grab sample is collected, and by using a pH meter that has been properly calibrated according to manufacturer's specifications and provides results displayed in numeric units. A color comparison analysis for pH is not acceptable.

~~(8)~~ (7) There shall be a minimum of three (3) months between reported sampling events.

~~(9)~~ (10) Samples must be taken at a point representative of the discharge but prior to entry into surface waters of the state or a municipal separate storm sewer conveyance, unless an alternative location has been granted by the commissioner. For discharges that flow through on-site detention basins, samples shall be taken at a point representative of the discharge from the basin.

~~(10)~~ (9) All samples must be collected from a discharge resulting from a measurable storm event at least seventy-two (72) hours from the previous measurable storm event. Documentation of weather conditions that prevent sampling as described in this subsection must be provided to the commissioner.

~~(11)~~ (10) The analytical and sampling methods used must meet the requirements of 327 IAC 5-2-13(d)(1) and 327 IAC 5-2-13(d)(2) for quality assurance and quality control.

~~(12)~~ (11) Run-off events resulting from snow or ice melt should not be sampled, and shall not be used to meet the minimum annual monitoring requirements.

(b) Reporting requirements shall be as follows:

(1) All samples must be reported as a value of concentration or loading.

(2) For each measurement or sample taken under this rule, the permittee shall record and submit the following information to the commissioner:

(A) The exact place, date, and time of the start of the discharge, the duration of the storm event sampled, a measurement of the rainfall in inches, and time of sampling.

(B) The duration between the storm event sampled and the end of the previous measurable storm event.

(C) The individual who performed the sampling or measurements.

(D) The dates the analyses were performed.

(E) The individual who performed the analyses.

(F) The analytical techniques or methods used.

(G) The results of all required analyses and measurements.

(H) A complete copy of the laboratory report, including chain-of-custody.

(3) All records and information resulting from the monitoring activities required under this rule, including all records of analyses performed and calibration and maintenance of instrumentation, must be retained for a minimum of either one (1) year following the date on an NOT letter, three (3) years following the expiration of the facility's permit, or longer if requested by the commissioner. As applicable, the records for calibration and maintenance of instrumentation can be maintained at an off-site laboratory, but must be available to the commissioner upon request.

All calibration and maintenance records for on-site instruments, such as pH

meters, used by a facility for compliance with this rule must be documented and either contained in, or have the on-site record keeping location referenced in, the SWP3.

(4) A permittee regulated under this rule shall submit sampling data results to the commissioner at the address specified in section 8.5 of this rule within thirty (30) days after laboratory analyses have been completed.

(5) A permittee regulated under this rule that has a discharge which enters a regulated municipal separate storm sewer conveyance shall also submit a copy of the sampling data results to the operator of the regulated municipal system conveyance upon request.

(6) If a permittee regulated under this rule monitors a pollutant more frequently than required under this rule, using analytical methods referenced in subsection (a)(11)(10), the results of such monitoring must be reported as additional information in the annual report. Such increased frequency must also be indicated in the report.

(Water Pollution Control Board; 327 IAC 15-6-7.3)

SECTION 28. 327 IAC 15-6-7.5 IS ADDED TO READ AS FOLLOWS:

327 IAC 15-6-7.5 Annual Reports

Authority: ~~—~~ IC 13-14-8; IC 13-15-1-2; IC 13-15-2; IC 13-18-3; IC 13-18-4

Affected: ~~—~~ IC 13-12-3-1; IC 13-18-1

Sec. 7.5. A facility permittee regulated under this rule shall submit an annual report to the commissioner that contains the following information:

(1) Any changes to the original NOI letter.

(2) Any changes to the facility, the facility's operations or industrial activities.

(3) During the second through fifth years of permit coverage, a copy of the ~~comparative table~~ comparison of all sampling data results included in the facility's SWP3 and required under section 7(b)(7) (8)(9) of this rule.

(4) Any additional BMPs implemented, or corrective measures taken, as a result of sampling data results.

~~(5) Any additional good housekeeping or pollution prevention measures implemented.~~

The annual report must contain information obtained during the previous year of regulation and be submitted initially no later than three hundred sixty-five (365) days from the initial NOI submittal date, or the expiration date of the previous five (5) year permit term. Subsequent annual report submittals shall be provided no later than three hundred sixty-five (365) days from the previous report in years two (2) through five (5) .

(Water Pollution Control Board; 327 IAC 15-6-7.5)

SECTION 29. 327 IAC 15-6-8.5 IS ADDED TO READ AS FOLLOWS:

327 IAC 15-6-8.5 Permit compliance schedule

Authority IC 13-18-3; IC 13-18-4; IC 13-14-8; IC 13-15-1-2; IC 13-15-2
Affected: ~~IC 13-18-1; IC 13-12-3-1~~

Sec. 8.5. The following compliance schedule must be followed:

Permit Compliance Schedule

To apply for coverage	Submit a completed NOI letter
1 st Year of permit coverage	Submit results of sampling data Develop and implement the SWP3 Submit SWP3 certification checklist Submit annual report
2 nd Year of permit coverage	Submit results of sampling data Submit annual report
3 rd Year of permit coverage	Submit results of sampling data Submit annual report
4 th Year of permit coverage	Submit results of sampling data Submit annual report
5 th Year of permit coverage	Submit results of sampling data Submit annual report
90 days before permit expires Permit renewals	Resubmit a completed NOI letter Repeat annual sampling schedule; Submit SWP3 certification checklist
	during the first year of renewal coverage only if substantial changes have been made on site or to the plan since its inception
	Submit annual reports

~~Annual report permit compliance information obtained during the previous year shall be postmarked no later than the twenty-eighth day of January each year. All other reports must be sent in as soon as they are complete. The reports~~ The compliance schedule begins from the date on the initial NOI letter submittal, or the expiration date of the previous five (5) year permit term. All submittals must be sent to:

Attention: Rule 6 Coordinator
Indiana Department of Environmental Management
Office of Water Quality
100 North Senate Avenue
P.O. Box 6015
Indianapolis, Indiana 46206-6015
(*Water Pollution Control Board; 327 IAC 15-6-8.5*)

SECTION 30. 327 IAC 15-6-10 IS ADDED TO READ AS FOLLOWS:

327 IAC 15-6-10 Duration of coverage and renewal

Authority: IC 13-14-8; IC 13-15-1-2; IC 13-15-2; IC 13-18-3; IC 13-18-4

Affected: IC 13-12-3-1; IC 13-18-1

Sec. 10. A permit issued under this rule is valid for a period of five (5) years from the date that the commissioner receives an original NOI letter. To obtain renewal of coverage under this rule, the information required under 327 IAC 15-3 and section 5 of this rule must be submitted to the commissioner ninety (90) days prior to the ~~termination~~ expiration of coverage under this rule, unless the commissioner determines that a later date is acceptable. Coverage under renewal NOI letters will begin on the date of expiration from the previous five (5) year permit term. (*Water Pollution Control Board; 327 IAC 15-6-10*)

SECTION 31. 327 IAC 15-6-11 IS ADDED TO READ AS FOLLOWS:

327 IAC 15-6-11 Termination of coverage; permit not transferable

Authority: IC 13-14-8; IC 13-15-1-2; IC 13-15-2; IC 13-18-3; IC 13-18-4;

Affected: IC 13-12-3-1; IC 13-18-1

Sec. 11. (a) A complete, state-issued NOT letter request form shall be submitted by a permittee regulated under this rule to the commissioner for any of the following:

- (1) closure of the facility;
- (2) transfer of ownership or operator;
- (3) no exposure of all facility industrial activities to storm water;
- (4) all storm water run-off from the facility flows into a combined sewer system; or
- (5) storm water does not have the potential to impact a water of the state.

~~Sec. 11.~~ **(b)** A ~~facility~~ permittee regulated under this rule shall submit a complete, state-issued NOT letter request form to the commissioner upon closure of the facility or upon transfer of ownership or operator as defined in 327 IAC 15-2-8 within thirty (30) days of the date of closure or transfer. The new owner or operator must submit a new NOI letter within sixty (60) days of the date of closure or transfer.

(c) For a permittee to claim termination based on no exposure to industrial activities, a complete "No Exposure Certification" form referenced in section 12 of this rule must be submitted with the NOT letter request form.

(d) For a permittee to claim termination based on all storm water run-off flowing into a combined sewer system, a certification letter from the responsible party of the combined sewer system, on responsible party letterhead, shall be submitted with the NOT letter request form.

(e) The completed NOT request form will be reviewed by the commissioner within sixty (60) days of the submittal date. During this sixty (60) day review period, the permit shall remain effective. Once the review is complete, one (1) of the following may occur:

- (1)an NOT letter will be mailed to the requester;
- (2) an on-site verification inspection will be requested; or
- (3) the NOT request will be denied.

If the permittee does not receive any of the above notifications within sixty (60) days of the NOT request submittal, the NOT request will be considered adequate.

- (f) An NOT letter may be issued by the commissioner, if:
- (1) effluent standards and limitations are promulgated for discharges subject to this rule; or
 - (2) it is determined that a general permit is not adequate to protect water quality.
- When a general permit is not adequate, an individual NPDES storm water permit will be issued.

(Water Pollution Control Board; 327 IAC 15-6-11)

SECTION 32. 327 IAC 15-6-12 IS ADDED TO READ AS FOLLOWS:

327 IAC 15-6-12 Conditional no exposure exclusion

Authority: IC 13-14-8; IC 13-15-1-2; IC 13-15-2; IC 13-18-3; IC 13-18-4

Affected: IC 13-12-3-1; IC 13-18-1

Sec. 12. (a) In addition to the definitions contained in IC 13-11-2, 327 IAC 5, 327 IAC 15-1-2, and 327 IAC 15-6-4, the following definitions apply throughout this section:

- (1) “Adequately maintained vehicle” means a vehicle (truck, automobile, forklift, trailer, or other general purpose vehicle) found on facility property that is not industrial machinery, and not leaking or otherwise a potential source of contaminants.
- (2) “Final product” means a product that is not used in producing other products, and is built and intended for use outdoors, provided the final product has not deteriorated or has otherwise become a potential source of contaminants.
- (3) “Industrial materials and activities” means material handling equipment or activities; industrial machinery; raw materials, intermediate products, by-products, and final products; or waste products.
- (4) “Intermediate product” means a product that is used in the composition of yet another product.
- (5) “Material handling activity” means the storage, loading and unloading, transportation, or conveyance of any raw material, intermediate product, finished product, byproduct, or waste product. The term does not include activities conducted on facility property separate from the facility's industrial activities, such as office buildings and accompanying parking lots, as long as the drainage from the excluded areas is not mixed with storm water drained from the included areas.
- (6) “Sealed container” means a container that has been banded or otherwise secured, without operational taps or valves, provided the container is not deteriorated and does not leak.

(7) “Storm-resistant shelter” means a completely roofed and walled building or structure, as well as, a structure with only a top cover but no side coverings, provided material under the structure is not otherwise subject to any run-on and subsequent run-off of storm water.

~~(a)~~(b) A facility regulated under this rule may request an exclusion from permit coverage by:

(1) submitting a complete United States Environmental Protection Agency “No Exposure Certification” form 3510-11 (10-99) to the commissioner; ~~and~~

~~(2) certifying that no storm water is potentially exposed to industrial activity.~~

~~If an industrial activity or material at a facility will be exposed to precipitation, the facility is not eligible for exclusion under this section. A copy of the “No Exposure Certification” form must also be submitted to the operator of any regulated municipal separate storm sewer system (MS4) into which the facility is eligible for the exclusion.~~

(3) allowing the commissioner to inspect the facility to determine compliance with the “no exposure” conditions;

(4) allowing the commissioner to make any “no exposure” inspection reports available to the public upon request; and

(5) for facilities that discharge through a regulated MS4 conveyance, upon request, submit a copy of the certification of “no exposure” to the MS4 operator, as well as allow inspection and public reporting by the MS4 operator.

(c) New or existing facilities that were not previously required to obtain a permit under this rule, but are subject to it, must either obtain permit coverage in accordance with sections 5 and 6 of this rule, or comply with the procedures in subsection (b).

(d) Facilities that have an existing permit under 327 IAC 15-6 must also submit a notice of termination (NOT) letter with the “No Exposure Certification” form.

(e) To determine if a facility can apply for the no exposure certification, the following must be considered:

(1) A condition of no exposure exists at an industrial facility when all industrial materials and activities are protected by a storm resistant shelter to prevent exposure to rain, snow, snowmelt, and run-off.

(2) The conditional no exposure exclusion is available on a facility-wide basis only, not for individual outfalls, and a no exposure certification must be provided for each facility qualifying for the no exposure exclusion.

(3) The no exposure certification requirement applies to all industrial facilities regulated under this rule, including light industrial facilities that were previously not required to submit documentation to be excluded from storm water permitting requirements.

(4) A storm resistant shelter is not required for the following industrial materials and activities:

- (A) drums, barrels, tanks, and similar containers that are tightly sealed, provided these containers are not deteriorated and do not leak;
 - (B) adequately maintained vehicles used in material handling; and
 - (C) final products, except those products that would be mobilized in storm water discharges (for example, rock salt), products which may, when exposed to storm water, oxidize, deteriorate, leak or otherwise be a potential source of contaminants, or final products which are in actuality intermediate products.
- (5) Particulate matter emissions from roof stacks and vents that are regulated by, and in compliance with, other environmental protection programs (for example, air quality control programs) and do not cause storm water contamination are considered not exposed. Particulate matter or visible deposits of residuals from roof stacks and vents not otherwise regulated (for example, under an air quality control program) and evident in storm water discharges are considered exposed. Likewise, visible “track out” (pollutants carried on the tires of vehicles) and windblown raw materials are considered exposed.
- (6) General and industrial refuse and trash are not considered exposed as long as the containers are completely covered and nothing can drain out holes in their bottoms, or is lost in loading onto a garbage truck. General and industrial refuse and trash that are left uncovered, however, are considered exposed.
- (7) Storm water run-off from separate office buildings and their associated parking lots do not need to be considered when determining no exposure at an industrial facility.
- (8) Temporary covers may be used to shelter materials and activities until permanent enclosure can be achieved. The temporary sheltering of industrial materials and activities is only allowed during facility renovation or construction.
- (9) Aboveground storage tanks (ASTs) are generally considered not exposed and may be exempt from the prohibition against adding, or withdrawing materials, to, or from, external containers. For an AST to be operational and qualify for no exposure:
- (A) it must be physically separated from, and not associated with, vehicle maintenance operations.
 - (B) there must be no piping, pumps or other equipment leaking contaminants that could contact storm water.
 - (C) it must be surrounded by some type of physical containment to prevent run-off in the event of a structural failure or leaking transfer valve.
- (f) The no exposure certification must require the submission of the following information, at a minimum, to aid the department in determining if the facility qualifies for the no exposure exclusion:
- (1) the person's name, address and phone number;
 - (2) the facility name and address, the county name and the latitude and longitude where the facility is located;
 - (3) the certification must indicate that none of the following materials or activities are, or will be in the foreseeable future, exposed to precipitation:

- (A) using, storing or cleaning industrial machinery or equipment, and areas where residuals from using, storing or cleaning industrial machinery or equipment remain and are exposed to storm water;
- (B) materials or residuals on the ground or in storm water inlets from spills or leaks;
- (C) materials or products from past industrial activity;
- (D) material handling equipment (except adequately maintained vehicles);
- (E) materials or products during loading and unloading or transporting activities;
- (F) materials or products stored outdoors (except final products intended for outside use, for example, new cars, where exposure to storm water does not result in the discharge of pollutants);
- (G) materials contained in open, deteriorated or leaking storage drums, barrels, tanks, and similar containers;
- (H) materials or products handled or stored on roads or railways owned or maintained by the facility;
- (I) waste material (except waste in covered, non-leaking containers, for example, dumpsters);
- (J) application or disposal of process wastewater (unless otherwise permitted); and
- (K) particulate matter or visible deposits of residuals from roof stacks or vents not otherwise regulated, that is, under an air quality control permit, and evident in the storm water outflow;

(4) all “no exposure” certifications must include the following certification statement, and be signed in accordance with 327 IAC 15-4-3(g): “I certify under penalty of law that I have read and understand the eligibility requirements for claiming a condition of “no exposure” and obtaining an exclusion from NPDES storm water permitting; and that there are no discharges of storm water contaminated by exposure to industrial activities or materials from the industrial facility identified in this document (except as allowed under (d)(4) of this section). I understand that I am obligated to submit a no exposure certification form once every five (5) years to the department and, if requested , to the operator of the local regulated MS4 into which this facility discharges (where applicable). I understand that I must allow the department, or MS4 operator where the discharge is into the local regulated MS4, to perform inspections to confirm the condition of no exposure and to make such inspection reports publicly available upon request. I understand that I must obtain coverage under an NPDES permit prior to any point source discharge of storm water from the facility. I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based upon my inquiry of the person or persons who manage the system, or those persons directly involved in gathering the information, the information submitted is to the best of my knowledge and belief true, accurate and complete. I am aware there are significant penalties

for submitting false information, including the possibility of fine and imprisonment for knowing violations."

~~(b)~~(g) Information contained in the "No Exposure Certification" form 3510-11 (10-99) * and the United States Environmental Protection Agency's "Guidance Manual for Conditional Exclusion from Storm Water Permitting Based on "No Exposure" of Industrial Activities to Storm Water"(EPA 833-B-00-001 June 2000)** shall be used by the commissioner to determine whether a facility is eligible for the exclusion. Definitions of terms provided in these documents shall apply to the commissioner's interpretation of the no exposure exclusion.

~~(e)~~(h) ~~The commissioner shall notify the facility in writing whether the "No Exposure" exclusion for permit coverage is granted.~~—A facility excluded under this section shall meet the following requirements:

(1) A copy of the "No Exposure Certification" form must be retained on site at the facility for a period of five (5) years following the date that the commissioner received the original form in order for the no exposure exclusion to remain applicable.

(2) The "No Exposure Certification" ~~F~~form must be submitted once every five (5) years to the commissioner.

(3) The certification for no exposure is nontransferable. If a new operator or owner takes over a facility, the new operator shall immediately complete and submit a new certification form in order to claim the exclusion.

(4) If changes at a facility result in industrial activities or materials becoming exposed to storm water, the no exposure exclusion ceases to apply. The person with financial responsibility or operational control for the facility must submit an NOI letter in accordance with section 5 or this rule at least two (2) days before the foreseen changes happen that cause the condition of exposure.

(5) If unforeseen events, such as spills, equipment malfunctions or acts of nature, cause industrial activities or materials to become exposed to storm water, the no exposure exclusion may still apply provided notification is given to the commissioner within twenty-four (24) hours of facility personnel becoming aware of the exposure and corrective measures are taken to re-establish a condition of no exposure prior to the next storm water discharge event.

~~(d)~~(i) If the commissioner finds that, during a compliance inspection or at a later time, the facility has a reasonable potential to cause a violation or non-attainment of a water quality standard or does not meet the conditions for the no exposure exclusion, the commissioner may, upon notifying the facility in writing, deny or revoke the exclusion and require the facility to obtain permit coverage within thirty (30) days of the date on the notification letter.

(e)(j) Failure to maintain the condition of no exposure or obtain coverage under an NPDES permit may lead to the unauthorized discharge of pollutants to waters of the state.
